A Handbook of Soil Terminology, Correlation and Classification

Pavel Krasilnikov, Juan-Jose Ibanez Marti, Richard Arnold, Serghei Shoba, 2009-12-01 Soil classification and terminology are fundamental issues for the clear understanding and communication of the subject However while there are many national soil classification systems these do not directly correlate with each other This leads to confusion and great difficulty in undertaking comparative scientific research that draws on more than one system and in making sense of international scientific papers using a system that is unfamiliar to the reader This book aims to clarify this position by describing and comparing different systems and evaluating them in the context of the World Reference Base WRB for Soil Resources The latter was set up to resolve these problems by creating an international umbrella system for soil correlation All soil scientists should then classify soils using the WRB as well as their national systems The book is a definitive and essential reference work for all students studying soils as part of life earth or environmental sciences as well as professional soil scientists Published with International Union of Soil Sciences

Developments in Soil Classification, Land Use Planning and

Policy Implications Shabbir A. Shahid, Faisal K. Taha, Mahmoud A. Abdelfattah, 2013-02-15 As the world's population continues to expand maintaining and indeed increasing agricultural productivity is more important than ever though it is also more difficult than ever in the face of changing weather patterns that in some cases are leading to aridity and desertification The absence of scientific soil inventories especially in arid areas leads to mistaken decisions about soil use that in the end reduce a region's capacity to feed its population or to guarantee a clean water supply Greater efficiency in soil use is possible when these resources are properly classified using international standards Focusing on arid regions this volume details soil classification from many countries It is only once this information is properly assimilated by policymakers it becomes a foundation for informed decisions in land use planning for rational and sustainable uses
