¿QUÉ ES EL SOL?

El Sol es una estrella, es decir, un cuerpo celeste capaz de generar luz propia. Es la estrella que forma parte central del Sistema Solar y todos los planetas giran alrededor de él.

En cuanto a su tamaño, su diámetro es de 1,4 millones de kilómetros. En cuanto a su temperatura, puede alcanzar los 5500 grados centígrados en la superficie y más de 15,5 millones de grados centígrados en el núcleo. En cuanto a su composición, está formado por hidrógeno y helio.

La superficie del Sol está dividida en tres regiones: la fotosfera, la cromosfera y la corona solar.

Steigenga, 2013-04-15 Across the United States the issue of immigration has generated rancorous debate and divided communities Many states and municipalities have passed restrictive legislation that erodes any sense of community Against the Tide tells the story of Jupiter Florida a coastal town of approximately 50 000 that has taken a different path At the beginning of the twenty first century Jupiter was in the throes of immigration debates A decade earlier this small town had experienced an influx of migrants from Mexico and Guatemala Immigrants seeking work gathered daily on one of the city's main streets creating an ad hoc open air labor market that generated complaints and health and human safety concerns What began as a local debate rapidly escalated as Jupiter's situation was thrust into the media spotlight and attracted the attention of state and national anti immigrant groups But then something unexpected happened immigrants neighborhood residents university faculty and students and town representatives joined together to mediate community tensions and successfully moved the informal labor market to the new
