Solar Radiation And Daylight Models For The Energy Efficient Design Of Buildings:

Solar Radiation and Daylight Models for Energy Efficient Design of Buildings Tariq Muneer, H. Kambezidis, 1997 This book and CD Rom package provides an accessible user friendly database on daylight design data With the boom in interest in energy efficiency and solar design it provides a valuable source for architects and engineers It describes models which can be used to provide essential data at any place in the world These models are included on a disk to ease the task of the architect or engineers The authors show how these models can be applied to the energy efficient design of buildings Electronic product for calculation of data at any point in the world Very important data source Looks at current green building design issues

Solar Radiation and Daylight Models Tariq Muneer, 2007-03-30 The cost of operating a building far exceeds the cost of constructing it and yet until recently little attention was paid to the impact of solar radiation on the costs of heating cooling and ventilation And now that there has been a surge in interest in energy efficiency and solar design architects and designers need a practical guide to the modelling and application of solar energy data There are many different models and techniques available for calculating the distribution of solar radiation on and in buildings and these algorithms vary considerably in scope accuracy and complexity This book demonstrates which of these predictive tools gives the best results in different circumstances including explaining which models can be best used in different parts of the world The author has had over twenty five years of experience of dealing with solar energy data from four continents and has used that experience in this book to show the development not just of knowledge but also the growing sophistication of the models available to apply it

Energy Simulation in Building Design Joseph Clarke, 2007-11-02 Since the appearance of the first edition of *Energy Simulation in Building Design* the use of computer based appraisal tools to solve energy design problems within buildings has grown rapidly A leading figure in this field Professor Joseph Clarke has updated his book throughout to reflect these latest developments The book now includes material on combined thermal lighting and CFD simulation advanced glazings indoor air quality and photovoltaic components This thorough revision means that the book remains the key text on simulation for architects building engineering consultants and students of building engineering and environmental design of buildings The book's purpose is to help architects mechanical environmental engineers and energy facility managers to understand and apply the emerging computer methods for options appraisal at the individual building estate city region and national levels This is achieved by interspersing theoretical derivations relating to simulation within an evolving description of the built environment as a complex system The premise is that the effective application of any simulation tool requires a thorough understanding of the domain it addresses

Daylight Design of Buildings Nick Baker, Koen Steemers, 2014-01-02 To complement the critical and objective view gleaned from the study of some sixty buildings this design manual has been developed to provide a more synthetic approach to the principles which lie behind successful daylight design These principles are illustrated with examples drawn from the case study buildings The emphasis

throughout has been on practical methods to improve design rather than techniques studied for any intrinsic interest The book provides the necessary tools to assist the designer to provide well daylit interiors and shows that good daylight design is not a restriction on architectural expression but on the contrary acts as an inspiration and foundation for good architecture

Diffuse Solar Radiation Modeling Prof. Yasser A. Abdel-Hadi, 2021-12-03 This book introduces an updated review of the studies and researches carried out about the modeling approaches and techniques for calculating the diffuse solar radiation The author has taken care to classify justify and test the presented models The final product of this book is to form a reasonable imagination about the future work of the field since it is very important in many applications needed in our life such as solar energy utilization weather forecast and pollution problems It can be also considered as a state of the art in this field through suggesting the future work adopted to continue to reach better values that could be used in developing the life of the humans in this world

Daylight Science and Daylighting Technology Richard Kittler, Miroslav Kocifaj, Stanislav Darula, 2011-10-22 Sunlight profoundly influences the Earth's atmosphere and biosphere Nature fuels the evolution of all living things their visual systems and the manner in which they adapt accommodate and habituate Sun luminance measurements serve as data to calculate typical changes in the daily monthly and annual variability characteristics of daylight Climate based sky luminance patterns are used as models in predicting daylighting calculation and computer programs applied in architecture and building design Historically daylight science and daylighting technology has prioritized photometric methods of measurements calculation and graphical tools aimed at predicting or evaluating the daylighting of architectural design alternatives However due to a heightened awareness of general health and well being sunlight exposure and freedom from visual discomfort while undertaking visual tasks are now equally prioritized Therefore in order to assure optimal environmental quality daylighting technology must be based on sound science Daylight Science and Daylighting Technology by Richard Kittler Miroslav Kocifaj and Stanislav Darula sketches the entire evolution of daylight science from atmospheric science through apt visual workplace psychophysics

Discourse Concepción Orna-Montesinos,2012-01-17 This book explores the fascinating role that language plays in the construction of non verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities In this respect the book offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of the discursive and professional practices of a discipline Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering The book starts from the analysis of domain specific texts as final

written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as textual artefacts closely linked to the social context of production and interpretation of the text This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced
