Solar Variability and Terrestrial Climate

Author: Dr. Tony Phillips | Production editor: Dr. Tony Phillips | Credit: Science@NASA

Jan. 8, 2013: In the galactic scheme of things, the Sun is a remarkably constant star. While some stars exhibit dramatic pulsations, wildly yo-yoing in size and brightness, and sometimes even exploding, the luminosity of our own sun varies a measly 0.1% over the course of the 11-year solar cycle.

There is, however, a dawning realization among researchers that even these apparently tiny variations can have a significant effect on terrestrial climate. A new report issued by the National Research Council (NRC), "The Effects of Solar Variability on Earth's Climate," lays out some of the surprisingly complex ways that solar activity can make itself felt on our planet.

Sun-Climate (cycle, strip)

These six extreme UV images of the sun, taken by NASA's Solar Dynamics Observatory, track the rising level of solar activity as the sun ascends toward the peak of the latest 11-year sunspot cycle. [More](#)

Understanding the sun-climate connection requires a breadth of expertise in fields such as plasma physics, solar activity, atmospheric chemistry and fluid dynamics, energetic particle physics, and even terrestrial history. No single researcher has the full range of

Environmental Challenges in the Mediterranean 2000-2050 Antonio Marquina, 2012-12-06 This book collects most of the contributions prepared for the NATO Advanced Research Workshop ARW on Environmental Challenges in the Mediterranean 2000-2050 The ARW took place in Madrid from 2 to 5 of October 2002 Scholars and researchers from North and South of the Mediterranean and other countries from NATO gathered in Madrid for discussing several important factors that could affect Mediterranean security in the next 50 years In this regard the first chapter presents the different debates regarding

environmental security that took place in the last decade This chapter is an introductory chapter and takes into account the possible audience in the Southern Mediterranean and the wishes of some contributors For this reason the chapter deals in extenso with the question of human security and the different approaches The ARW dealt with issues that may affect the supply of fundamental goods for human living To this end the complex question of climate change its impact in the Mediterranean the predicted increase in temperatures and predictions about rainfall are analysed As part of this approach a chapter about solar variability and climate change is also added

Greenhouse-Gas-Induced Climatic Change M.E. Schlesinger, 2017-05-04 The proceedings of this workshop provide a valuable review of the methodologies of climate observations during the past 150 years together with a summary of their findings and a description of the difficulties inherent in their interpretation In addition the volume reviews the use of climate model simulations of greenhouse gas induced equilibrium and nonequilibrium change Finally the contributed papers consider the methodologies of climate change detection by comparison of model simulations and climate observations a summary of findings and a description of what should be done to detect GHG induced climate change The volume will be of particular interest to researchers and students in the fields of meteorology atmospheric science oceanography global change and
