Solid/liquid Separation H. S. Muralidhara,1990 *Handbook of Waste Management and Co-Product Recovery in Food Processing* Keith W. Waldron,2007-03-31 The intensification of agriculture and food production in recent years has led to an increase in the production of food co products and wastes Their disposal by incineration or landfill is often expensive as well as environmentally sensitive Methods to valorise unused co products and improve the management of wastes that cannot be reused as well as techniques to reduce the quantity of waste produced in the first place are increasingly important to the food industry With its distinguished editor and array of international contributors Waste management and co product recovery in food processing reviews the latest developments in this area and describes how they can be used to reduce waste The first section of the book provides a concise introduction to the field with a particular focus on legislation and consumer interests principle drivers of waste management Part two addresses the minimisation of biowaste and the optimisation of water and energy use in food processing The third section covers key technologies for co product separation and recovery such as supercritical fluid extraction and membrane filtration as well as important issues to consider when recovering co products such as waste stabilisation and microbiological risk assessment Part four offers specific examples of waste management and co product exploitation in particular sectors such as the red meat poultry dairy fish and fruit and vegetable industries The final part of the book summarises advanced techniques to dispose of waste products that cannot be reused and reviews state of the art technologies for wastewater treatment Waste management and co product recovery in food processing is a vital reference to all those in the food processing industry concerned with waste minimisation co product valorisation and end waste management Looks at the optimisation of manufacturing procedures to decrease waste energy and water use Explores methods to valorise waste by co product recovery Considers best practice in different sectors of the food industry *Selected Water Resources Abstracts* ,1991 Surfactant Enhancements ,1995 *Selected Water Resources Abstracts* ,1991 *Solid Residuals Management at Centralized Vehicle Wash Facilities* Trudy J. In Situ Thermal Technologies for Site Remediation Robert E. Hinchee, Lawrence A. Smith, 1992-11-10

In Situ Thermal Technologies for Site Remediation is a comprehensive volume covering the state of the art in the field. The book begins with a basic review of the thermodynamics of heat transfer and contaminant behavior in soils and is followed by summaries of data on various soil heating technologies. Technologies covered include steam injection, radio frequency RF, Joule resistance, passive and active solar heating, and hot gas injection. For each technology, actual applications, costs, discussions of advantages and disadvantages, and a thorough literature review are provided. In Situ Thermal Technologies for Site Remediation can help engineers in selecting and implementing the appropriate technologies for specific situations. The book will assist managers in their review and evaluation of technologies. Regulators will gain a better understanding of the applicability of available technologies after reading this volume.

Advances in Soil Science, 2012-12-06

Soil degradation is clearly one of the most pressing problems facing mankind. A continuation of soil degradation will eventually lead to a loss in crop productivity, even though fertilizers and other inputs often result in increased yields in the short term. Soil degradation also leads to environmental pollution. A decrease in soil quality invariably leads to a decrease in water quality and often in air quality. While there is a clear consensus that soil degradation is a major problem, the literature on this subject leaves numerous baffling questions. If statistics on land degradation are correct, there is a definite cause for concern and present a mammoth challenge for agricultural scientists. There are those that say the scientific community has over-dramatized this issue and created a credibility problem. Consequently, Volume 11 of *Advances in Soil Science* was organized by Dr. Rattan Lal, who is recognized as a leading authority on the subject. The objective of Volume 11 was to assess the types and processes of soil degradation and establish some of the major cause-effect relationships. Volume II documented the seriousness of soil degradation in many parts of the world. Therefore, it seemed immediately important to devote a volume to the principles and technologies for restoring degraded soils to a productive status. While the land resources of the limited world population are rapidly increasing, particularly in developing countries.
