Tratados hipocráticos IV Varios autores, 2016-08-05 Este hito histórico de la filología clásica la traducción íntegra de los Tratados hipocráticos es una ocasión única no solo para los interesados en el nacimiento y la evolución de la ciencia médica sino para cualquier amante de la cultura griega. El Corpus Hippocraticum es un conjunto de más de cincuenta tratados médicos de enorme importancia pues constituyen los textos fundacionales de la ciencia médica europea y forman la primera biblioteca científica de Occidente. Casi todos se remontan a finales del siglo V y comienzos del IV a.C. la época en que vivieron Hipócrates y sus discípulos directos. No sabemos cuántos de estos escritos son del Padre de la Medicina pero todos muestran una orientación coherente e ilustrada racional y profesional que bien puede deberse al maestro de Cos. Más importante que la debatida cuestión de la autoría es comprender el alcance de esta medicina su empeño humanitario y su afán metódico. Este corpus resulta esencial no solo para la historia de la ciencia médica sino para el conocimiento cabal de la cultura griega. Este es el primer intento de verter al castellano todos estos tratados y se ha hecho con el mayor rigor filológico se ha partido de las ediciones más recientes y contrastadas de los textos griegos se han anotado las versiones a fin de aclarar cualquier dificultad científica o lingüística y se han añadido introducciones a cada uno de los tratados con lo cual se incorpora una explicación pormenorizada a la Introducción General que sitúa el conjunto de los escritos en su contexto histórico. El cuarto volumen de los Tratados hipocráticos incluye los textos de ginecología. Sobre las enfermedades en las mujeres. Sobre las mujeres estériles. Sobre las enfermedades de las vírgenes. Sobre la superfetación. Sobre la excisión del feto y Sobre la naturaleza de la mujer.
