Gene and Cell Therapies for Beta-Globinopathies Punam Malik, John Tisdale, 2017-11-09 Hemoglobin defects specifically sickle cell disease thalassemia combined constitute the most common monogenic disorders in the world In fact nearly 2% of the world's population carries a globin gene mutation The transfer of the corrective globin gene through the HSC compartment by allogeneic HSC transplantation HSCT has already proven curative in both SCD and thalassemia patients and provides the proof of concept that genetic manipulation of the defective organ might be equally therapeutic

However procedural toxicities and the requirement of an HLA matched sibling donor limit this approach to a fraction of affected individuals. The editors review the progress the state of the field in HSCT for hemoglobinopathies shed light on the major changes expected in the next decade. Although allogeneic HSCT is a curative option it is limited by the availability of matched donors which are often available only to 15-20% of patients. An alternative to allogeneic HSCT is genetic correction of autologous HSCs to overcome donor availability immune side effects. This Book reviews the progress made on additive gene therapy approaches the current state of the field. Finally targeted genetic correction is emerging as a novel therapeutic strategy in the hemoglobinopathies. Although ideal the inefficiency of targeted correction was rate limiting for translation of this technology to the clinic. With advancements in zinc finger nucleases and TALE endonuclease mediated targeted correction correction frequencies in hematopoietic stem cells is now reaching levels that may become clinically relevant. Furthermore the ability to generate autologous embryonic stem cell like cells from primary somatic cells skin fibroblasts or hematopoietic cells of the affected individual has allowed for the potential application of genetic correction strategies. This Book reviews upcoming genetic strategies to reactivate fetal hemoglobin production and research advances. **Frontiers in Hemoglobinopathies: New Insights and Methods** Roberta Risoluti, Stefano Materazzi, Roshan B.
