The Ontogeny Of Information Developmental Systems And Evolution Science And Cultural Theory:

The Ontogeny of Information Susan Oyama, 1985 Susan Oyama explores the many facets of the nature nurture debate

Evolution's Eye Susan Oyama, 2000-05-03 In recent decades Susan Oyama and her colleagues in the burgeoning field of developmental systems theory have rejected the determinism inherent in the nature nurture debate arguing that behavior cannot be reduced to distinct biological or environmental causes In *Evolution's Eye* Oyama elaborates on her pioneering work on developmental systems by spelling out that work's implications for the fields of evolutionary theory developmental and social psychology feminism and epistemology Her approach profoundly alters our understanding of the biological processes of development and evolution and the interrelationships between them While acknowledging that in an uncertain world it is easy to blame it on the genes Oyama claims that the renewed trend toward genetic determinism colors the way we think about everything from human evolution to sexual orientation and personal responsibility She presents instead a view that focuses on how a wide variety of developmental factors interact in the multileveled developmental systems that give rise to organisms Shifting attention away from genes and the environment as causes for behavior she convincingly shows the benefits that come from thinking about life processes in terms of developmental systems that produce sustain and change living beings over both developmental and evolutionary time Providing a genuine alternative to genetic and environmental determinism as well as to unsuccessful compromises with which others have tried to replace them *Evolution's Eye* will fascinate students and scholars who work in the fields of evolution psychology human biology and philosophy of science Feminists and others who seek a more complex view of human nature will find her work especially congenial

The Ontogeny of Information Susan Oyama, 1986-02-28 In *The Ontogeny of Information* Susan Oyama draws on psychology biology and anthropology as well as philosophy and history to explore the many facets of the nature nurture debate Our deepest beliefs about what is natural inevitable and unchangeable what is normal and good are affected by our concept of biological nature Because the non academic world also continues to frame important questions in terms of genetic necessity and cultural overlay this distinction between nature and culture has serious implications for the conduct of private lives and for the making of public policy

The Ontogeny of Information, 2009 DIV In this work the author attempts to complicate certain conventional dichotomies particularly the nature nurture split that she believes impede scientific inquiry and thought about individual development and to untangle the often subtle assumptions embedded in

The Principles of Life Tibor Ganti, 2003-09-18 Beginning with a new essay *Levels of Life and Death* Tibor Ganti develops three general arguments about the nature of life In *The Nature of the Living State* Professor Ganti answers Francis Crick's puzzles about life itself offering a set of reflections on the parameters of the problems to be solved in origins of life research and more broadly in the search for principles governing the living state in general *The Principle of Life* describes in accessible language Ganti's chief insight about the organization of living systems his theory of the chemoton or chemical automaton The simplest chemoton model of

the living state consists of three chemically coupled subsystems an autocatalytic metabolism a genetic molecule and a membrane G nti offers a fresh approach to the ancient problem of life criteria articulating a basic philosophy of the units of life applicable to the deepest theoretical considerations of genetics chemical synthesis evolutionary biology and the requirements of an exact theoretical biology New essays by E rs Szathm ry and James Griesemer on the biological and philosophical significance of G nti s work of thirty years indicate not only the enduring theoretical significance but also the continuing relevance and heuristic power of G nti s insights New endnotes by Szathm ry and Griesemer bring this legacy into dialogue with current thought in biology and philosophy G nti s chemoton model reveals the fundamental importance of chemistry for biology and philosophy G nti s technical innovation cycle stoichiometry at once captures the fundamental fact that biological systems are organized in cycles and at the same time offers a way to understand what it is to think chemically Perhaps most fundamentally G nti s chemoton model avoids dualistic thinking enforced by the dichotomies of modern biology germ and soma gene and character genotype and phenotype Darwinism and Pragmatism Lucas McGranahan,2017-02-24 Focusing on the work of William James 1842 1910 this study looks at Darwinian evolution within the context of a person oriented philosophy McGranahan argues for James as an innovator of evolutionary concepts and an early proponent of non reductionist Darwinism *Beyond the Brain* Benoit Hardy-Vallée,2009-03-26 Cognitive science faces a major methodological and conceptual change since the 90 s Whereas the brain was traditionally conceived as being the only seat of intelligence many researches emphasize the entrenchment of the brain in body context and culture In 2006 a conference was held at the Universit du Qu bec Montr al UQAM and allowed researchers from various fields to interact and discuss such issues Cognitio 2006 was an occasion for philosophers cognitive scientists and biologists to present the latest developments in their discipline and this book aims at providing a general overview of current research on embodied situated and distributed cognition New Perspectives on Early Social-Cognitive Development ,2020-08-26 New Perspectives on Early Social Cognitive Development Volume 258 in the Progress in Brain Research series highlights new advances in the field with this new volume presenting interesting chapters on topics such as Dynamics of Coordinated Attention Investigating the Role of Neural Body Maps in Early Social Cognitive Development New Insights from Infant MEG and EEG Motion tracking in developmental research Methodological considerations and social cognitive developmental applications Early maturation of the social brain How brain development provides a platform for the acquisition of social cognitive competence Getting a grip on early intention understanding The role of motor cognitive and social factors and much more Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Progress in Brain Research series Includes the latest information on New Perspectives on Early Social cognitive Development

Fundamentals of Comparative and Intercultural Philosophy Lin Ma,Jaap van Brakel,2016-03-25 This innovative book explores the preconditions necessary for intercultural and comparative philosophy Philosophical practices that involve

at least two different traditions with no common heritage and whose languages have very different grammatical structure such as Indo Germanic languages and classical Chinese are a particular focus Lin Ma and Jaap van Brakel look at the necessary and not so necessary conditions of possibility of interpretation comparison and other forms of interaction and how we can speak of similarities and differences in this context The authors posit that it is necessary to dissolve the question of universalism versus relativism by replacing the ideal language paradigm with a paradigm of family resemblances and that it is not necessary to share a common language to engage in comparison Numerous case studies are presented including many comparisons of Western and Chinese concepts

Merleau-Ponty's Developmental Ontology David Morris, 2018-10-15

Winner of the 2020 Edward Goodwin Ballard Prize in Phenomenology Merleau Ponty's Developmental Ontology shows how the philosophy of Maurice Merleau Ponty from its very beginnings seeks to find sense or meaning within nature and how this quest calls for and develops into a radically new ontology David Morris first gives an illuminating analysis of sense showing how it requires understanding nature as engendering new norms He then presents innovative studies of Merleau Ponty's The Structure of Behavior and Phenomenology of Perception revealing how these early works are oriented by the problem of sense and already lead to difficulties about nature temporality and ontology that preoccupy Merleau Ponty's later work Morris shows how resolving these difficulties requires seeking sense through its appearance in nature prior to experience ultimately leading to radically new concepts of nature time and philosophy Merleau Ponty's Developmental Ontology makes key issues in Merleau Ponty's philosophy clear and accessible to a broad audience while also advancing original philosophical conclusions
