The Omega Selection:

Experiencing Recruitment and Selection Jon Billsberry, 2008-02-28 Recruitment and selection can be a stressful and traumatic process for both people and organizations But how does it feel to actually be involved Giving a voice to both applicants and recruiters in a unique package *Experiencing Recruitment and Selection* uses real life stories to explore issues such as why people apply for jobs perceptions of fairness how failure affects internal applicants the impact of market forces on decisions how recruiters select for fit and much more In each chapter Jon Billsberry tackles a particular topic drawing on at least three related stories and concluding with provocative questions and a guide to further reading The stories are interwoven throughout with analyses that highlight key lessons

Select Thermodynamic Models for Process

Simulation Jean-Charles de Hemptinne, Jean-Marie Ledanois, 2012 The selection of the most adequate thermodynamic model in a process simulation is an issue that most process engineer has to face sooner or later This book conceived as a practical guide aims at providing adequate answers by analysing the questions to be looked at The analysis first chapter yields three keys that are further discussed in three different chapters 1 A good understanding of the properties required in the process and their method of calculation is the first key The second chapter provides to that end in a synthetic manner the most important equations that are derived from the fundamental principles of thermodynamics 2 An adequate description of the mixture which is a combination of models and parameters is the second key The third chapter makes the link between components and models both from a numerical parameterisation and physical molecular interactions point of view Finally 3 a correct view of the phase behaviour and trends in regard of the process conditions is the third key The fourth chapter illustrates the phase behaviour and makes model recommendations for the most significant industrial systems A decision tree is provided at the end of this chapter In the last chapter the key questions are reviewed for a number of typical processes This book is intended for process engineers who are not specialists of thermodynamics but are confronted with this kind of problems and need a reference book as well as process engineering students who will find an original approach to thermodynamics complementary of traditional lectures

World History Steven Wallech, Touraj Daryaei, Craig

Hendricks, Anne Lynne Negus, Peter P. Wan, Gordon Morris Bakken, 2013-01-22 *World History A Concise Thematic Analysis* presents the highly anticipated second edition of the most affordable and accessible survey of world history designed for use at the college level An engaging narrative that contextualizes history and does not drown students in a sea of facts Offers a comparative analysis of the great civilizations of Eurasia Africa and the Americas Addresses themes of population dynamics food production challenges disease history warfare and other major issues for civilizations Features new interior design and organization to enhance user experience Instructor's test bank available online at www.wiley.com/go/wallech
