Closed Head Injury: A Clinical Source Book 3rd Edition, Mild to moderate to severe closed head injuries result from accidents that force the soft tissue of the brain into contact with the hard bony skull. Long term effects and poor prognosis turn these injuries into major, often life-long problems. Until recently, physicians did not or could not diagnose many of them, and lawyers found them too difficult to prove. *Closed Head Injury: A Clinical Source Book* helps the practitioner understand how emerging diagnoses of previously ignored brain trauma can be a new source of compensation to injured parties. The author, a noted expert on the subject, clearly explains the nature of the injury, how to identify it, and the information you need to prove it. *Closed Head Injury: A Clinical Source Book* leads the trial attorney into new territories for litigation with up-to-date analysis and instruction on successful trial strategies. Written by leading neurologist Peter Bernad and his team, this volume provides a detailed and practical guide for litigating closed head injury cases. *Closed Head Injury: A Clinical Source Book* covers the medical and neuropsychological analysis of closed head injury, including its causes and effects, evaluation of damages, treatments, and trial techniques. The Fourth Edition contains important new and updated materials on topics related to closed head injuries, such as Medical Diagnosis and Treatment, Psychological Treatment, Treatment of Pain, Forensic Evidence, Insurance Analysis, ANS Monitoring, and Goals of Therapy

Pi: A Source Book Jonathan M. Borwein, 2013-06-29 Our intention in this collection is to provide largely through original writings an extended account of pi from the dawn of mathematical time to the present The story of pi reflects the most seminal the most serious and sometimes the most whimsical aspects of mathematics A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally with the subject It has been a part of human culture and the educated imagination for more than twenty five hundred years The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry analysis and special functions numerical analysis algebra and number theory It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development
