## Sink or Float

### Sink

The objects go down to the bottom.

### Float

The objects stay or move on the surface.

### Sink

Objects with more densely packed molecules that are closer together sink in water. For these objects to sink.

This will sink  
because it is more  
dense. It has fewer  
molecules.

### Float

The further apart molecules are in an object, the less dense that object is and the water it is in. It is float in water.

This will float  
because it is less  
dense. It has fewer  
molecules.

### Sink or Float? Experiment

You will need:  
• small objects (rock, coin, pencil, stick, ...)  
• a glass of water

**The Land-Water-Energy Nexus** Organisation for Economic Co-Operation and Development (OECD),2017-11-15 This report contributes to the discussion of interconnections between scarce resources by highlighting the nexus between land water and energy the LWE nexus It focuses on a dynamic integrated and disaggregated analysis of how land water and energy interact in the biophysical and economic systems The report provides projections for the biophysical and economic consequences of nexus bottlenecks until 2060 highlighting that while the LWE nexus is essentially local there can be significant large scale repercussions in vulnerable regions notably on forest cover and in terms of food and water security The analysis is based on coupling a gridded biophysical systems model with a multi regional multi sectoral dynamic general equilibrium modelling assessment Numerical insights are provided by investigating a carefully selected set of scenarios that are designed to illustrate the key bottlenecks one scenario for each resource bottleneck plus two scenarios that combine all bottlenecks with and without an overlay of climate change

**Equity in Science** Julie R. Posselt,2020-09-01 STEM disciplines are believed to be founded on the idea of meritocracy recognition earned by the value of the data which is objective Such disciplinary cultures resist concerns about

implicit or structural biases and yet year after year scientists observe persistent gender and racial inequalities in their labs departments and programs In *Equity in Science* Julie Posselt makes the case that understanding how field specific cultures develop is a crucial step for bringing about real change She does this by examining existing equity diversity and inclusion efforts across astronomy physics chemistry geology and psychology These ethnographic case studies reveal the subtle ways that exclusion and power operate in scientific organizations and sometimes within change efforts themselves Posselt argues that accelerating the movement for inclusion in science requires more effective collaboration across boundaries that typically separate people and scholars across the social and natural sciences across the faculty student administrator roles and across race gender and other social identities Ultimately this book is a call for academia to place equal value on expertise and on those who do the work of cultural translation Posselt closes with targeted recommendations for individuals departments and disciplinary societies for creating systemic sustainable change
