increasing poverty population migration and social tension      Environmental Geopolitics Shannon O'Lear, 2018-03-12 This thought provoking and clearly argued text provides a critical geopolitical lens for understanding global environment politics A subfield of political geography environmental geopolitics examines how environmental themes are used to support geopolitical arguments and physical realities of power and place Shannon O Lear considers common problematic traits of such familiar but widely misunderstood narratives about human environment relationships Mainstream themes about human environment relationships include narratives about presumed connections between human population trends and resource scarcity ways in which conflict and violence are linked to resource use or environmental degradation climate security and the application of science to solve environmental problems O Lear questions these narratives arguing that the role or meaning of the environment is rarely specified humans role in these situations tends to be considered selectively and little attention is paid to spatial dimensions of human environment relationships She shows that how we tend to think about environmental concerns often obscure value judgments and constrain more dynamic approaches to human environment relationships Environmental geopolitics demonstrates how we can question familiar assumptions to generate more just and creative approaches to our many relationships with the environment      Navigating Ethnicity David H. Kaplan, 2017-08-03 This important book provides a novel perspective on ethnicity nationality and race by considering how they are shaped by their geography Exploring the complicated terrain of ethnicity through an expansive global perspective David H Kaplan traces the spatial arrangements that convey such potent meaning to the identity and opportunities of members of any cultural group With examples from around the world the author considers the most important aspects of ethnicity from segregation to place making to multiculturalism culture regions diasporas and transnationalism He frames ethnicity as a contingent phenomenon showing how context and place determine the position definitions behaviors and attitudes toward and by members of an ethnic group Drawing on an impressive depth of historical and empirical detail Kaplan s analysis of the critical role of ethnicity in everyday geographies makes a major contribution to the field      The Urban Transformation Elliott D. Sclar, Nicole Volavka-Close, Peter Brown, 2013-05-07 For the first time in history half of the world s population lives in urban areas and it is expected that by 2050 that figure will rise to above two thirds A large proportion of this urban growth will be taking place in the cities of the developing world where the provision of adequate health shelter water and sanitation and climate change adaptation efforts for rapidly growing urban populations will be an urgent priority This transition to an urban world could be a negative transformation but if well planned it could also offer an unprecedented opportunity to improve the lives of some of the world s poorest people This volume brings together some of the world s foremost experts in urban development with the aim of approaching these issues as an opportunity for real positive change The chapters focus on three strategically critical aspects of this transformation public health shelter water and sanitation climate change adaptation These are considered using an integrated approach that takes account of the many different sectors and stakeholders

involved and always in terms of the solutions rather than the problems The book offers a blueprint for action in these sectors and will be of great interest to academics and policymakers in all aspects of urban development and planning *Growth*
