

A shovel with a wooden handle and a metal head is stuck upright in a mound of dark brown soil. The mound is situated in a vast, green field that stretches to the horizon. The sky above is a clear, bright blue with a few wispy white clouds. The title 'small steps' is written in a large, white, sans-serif font across the middle of the image, with the author's name 'louis sachar' in a smaller, bold, black font directly below it.

The author is not trying to write yet another book on the history of computer developments but rather to show that those developments rely on a long history of humans creating solutions to problems that arose as they became more and more sophisticated in their treatment of concepts of information and its manipulation. In many ways it resembles a work of philosophy more than a technical history but relies on explaining that technical history to make his points. Michael R Williams Department of Computer Sciences University of Calgary. The idea that the digital age has revolutionized our day to day experience of the world is nothing new and has been amply recognized by cultural historians. In contrast Stephen Robertson's BC Before Computers is a work which questions the idea that the mid twentieth century saw a single moment of rupture. It is about all the things that we had to learn invent and understand all the ways we had to evolve our thinking before we could enter the information technology revolution of the second half of the twentieth century. Its focus ranges from the beginnings of data processing right back to such originary forms of human technology as the development of writing systems gathering a whole history of revolutionary

moments in the development of information technologies into a single although not linear narrative Treading the line between philosophy and technical history Robertson draws on his extensive technical knowledge to produce a text which is both thought provoking and accessible to a wide range of readers The book is wide in scope exploring the development of technologies in such diverse areas as cryptography visual art and music and the postal system Through all this it does not simply aim to tell the story of computer developments but to show that those developments rely on a long history of humans creating technologies for increasingly sophisticated methods of manipulating information Through a clear structure and engaging style it brings together a wealth of informative and conceptual explorations into the history of human technologies and avoids assumptions about any prior knowledge on the part of the reader As such the expert and the general reader alike will find it of interest
