Provided by publisher Modeling Uncertainty with Fuzzy Logic Asli Celikyilmaz,I. Burhan Türksen,2009-04-08 The world we live in is pervaded with uncertainty and imprecision Is it likely to rain this afternoon Should I take an umbrella with me Will I be able to find parking near the campus Should I go by bus Such simple questions are a common occurrence in our daily lives Less simple examples What is the probability that the price of oil will rise sharply in the near future Should I buy Chevron stock What are the chances that a bailout of GM Ford and Chrysler will not succeed What will be the consequences Note that the examples in question involve both uncertainty and imprecision In the real world this is the norm rather than exception There is a deep seated tradition in science of employing probability theory and only probability theory to deal with uncertainty and imprecision The monopoly of probability theory came to an end when fuzzy logic made its debut However this is by no means a widely accepted view The belief persists especially within the probability community that probability theory is all that is needed to deal with uncertainty To quote a prominent Bayesian Professor Dennis Lindley The only satisfactory description of uncertainty is probability Computational Intelligence in Time Series Forecasting Ajoy K. Human Motion Sensing and Recognition Honghai Liu, Zhaojie Ju, Xiaofei Ji, Chee Seng Chan, Mehdi Khoury, 2017-05-11 This book

introduces readers to the latest exciting advances in human motion sensing and recognition from the theoretical development of fuzzy approaches to their applications. The topics covered include human motion recognition in 2D and 3D hand motion analysis with contact sensors and vision based view invariant motion recognition especially from the perspective of Fuzzy Qualitative techniques. With the rapid development of technologies in microelectronics, computers, networks and robotics over the last decade, increasing attention has been focused on human motion sensing and recognition in many emerging and active disciplines where human motions need to be automatically tracked, analyzed or understood, such as smart surveillance, intelligent human computer interaction, robot motion learning and interactive gaming. Current challenges mainly stem from the dynamic environment, data multi modality, uncertain sensory information and real time issues. These techniques are shown to effectively address the above challenges by bridging the gap between symbolic cognitive functions and numerical sensing control tasks in intelligent systems. The book not only serves as a valuable reference source for researchers and professionals in the fields of computer vision and robotics but will also benefit practitioners and graduates/postgraduates seeking advanced information on fuzzy techniques and their applications in motion analysis.

Applications of Computational Intelligence in Biology Tomasz G. Smolinski, Mariofanna G. Milanova, Aboul-Ella Hassanien, 2008-06-10

Computational Intelligence (CI) has been a tremendously active area of search for the past decade or so. There are many successful applications of CI in many subfields of biology including bioinformatics, computational genomics, protein structure prediction or neuronal systems modeling and analysis. However, there still are many open problems in biology that are in desperate need of advanced and efficient computational methodologies to deal with tremendous amounts of data that those problems are plagued by. Fortunately, biology researchers are very often unaware of the abundance of computational techniques that they could put to use to help them analyze and understand the data underlying their research inquiries. On the other hand, computational intelligence practitioners are often unfamiliar with the particular problems that their new state of the art algorithms could be successfully applied for. The separation between the two worlds is partially caused by the use of different languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of facilitating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other. The purpose of this book is to provide a medium for such an exchange of expertise and concerns. In order to achieve the goal, we have solicited contributions from both computational intelligence as well as biology researchers.
