

# AN INTRODUCTORY GUIDE TO PUTTING RESEARCH INTO PRACTICE

## 4. Finding new evidence – research design

Alan Borthwick, Lisa Farnon and Jackie Campbell

Conventionally, designs for research studies are divided into two categories: quantitative and qualitative. As will be seen later, the research design used should follow from the research question and ensure that data are collected and analysed in a way that will answer that question. However, the form that the research question takes is largely a function of underlying philosophy and of why the question is being asked in the first place.

**T**his article examines the main types of philosophical research stances as these underpin the resulting research methodologies. The main characteristics of quantitative and qualitative designs are outlined and, finally, some of the main research designs are described.

### RESEARCH PHILOSOPHIES

The main models of enquiry used are the positivist and the interpretative models.

#### The positivist model:

- The natural science model
- Based on testing theories and hypotheses
- Insists on objectivity and neutrality - avoidance of personal bias
- Researcher controls the theoretical framework, sampling frames and the structure of the research
- Theory/concepts developed before data collection - seeks to falsify the initial hypothesis
- Favours quantitative methods

#### The interpretative model

- Has its roots in philosophy, history, anthropology etc
- Approach centres on interpretation and creation of meaning by human beings
- Accepts subjective reality
- Looks at understanding rather than explanation
- Context is crucial
- Researchers are reflexive, not objective
- Favours qualitative methods

### QUANTITATIVE VS QUALITATIVE DESIGNS

The investigation of new knowledge can be approached in many ways. The approach taken depends on the nature and type of the research problem and the philosophical stance of the researcher (amongst other things). The most important thing, however, is that the methods should be chosen to answer the research question.

There is also a link between research design and analytical methods. Future articles in this series will focus on

**Software Architecture for Product Families** Mehdi Jazayeri, A. C. M. Ran, Frank van der Linden, 2000 Software development organizations are now discovering the efficiencies that can be achieved by architecting entire software product families together In *Software Architecture for Product Families* experts from one of the world's most advanced software domain engineering projects share in depth insights about the techniques that work and those that don't The book offers a solutions oriented case study approach covering the entire development lifecycle based on advanced work done by three of Europe's leading technology companies and their academic partners Discover the challenges that drive companies to consider architecting product families and the new problems they encounter in doing so Master concepts and terms that can be used to describe the architecture of a product family then learn how to assess that architecture and transform it into working applications The authors also present chapter length real world case studies of domain engineering projects at Nokia Philips and ABB

*Software Product Lines* Gary J. Chastek, 2003-08-02 Software product lines are emerging as an important new paradigm for software development Product lines are enabling organizations to achieve impressive time to market gains and cost reductions In 1997 we at the Software Engineering Institute SEI launched a Product Line Practice Initiative Our vision was that product line development would be a low risk high return proposition for the entire software engineering community It was our hope from the beginning that there would eventually be sufficient interest to hold a conference The First Software Product Line Conference SPLC1 was the realization of that hope Since SPLC1 we have seen a growing interest in software product lines Companies are launching their own software product line initiatives product line technical and business practices are maturing product line tool vendors are emerging and books on product lines are being published Motivated by the enthusiastic response to SPLC1 and the increasing number of software product lines and product line researchers and practitioners the SEI is proud to sponsor this second conference dedicated to software product lines We were gratified by the submissions to SPLC2 from all parts of the globe from government and commercial organizations From these submissions we were able to assemble a rich and varied conference program with unique opportunities for software product line novices experts and those in between This collection represents the papers selected from that response and includes research and experience reports

*Working IEEE/IFIP Conference on Software Architecture* Rick Kazman, 2001 The proceedings from the August 2001 conference in Amsterdam contain the abstracts of two

invited talks and 18 full papers covering a vast spectrum of topics from the essence of software architecture and its role in software engineering to issues of modeling and assessing architectures to significant achievements and industrial case studies Sections cover quality attributes and case studies product lines formal approaches representation components connectors and collaborators and patterns and tools Author index only c Book News Inc     *Software Product Lines* ,2002

*Software Product Line* Abdelrahman Elfaki,2012-04-04 The Software Product Line SPL is an emerging methodology for developing software products Currently there are two hot issues in the SPL modelling and the analysis of the SPL Variability modelling techniques have been developed to assist engineers in dealing with the complications of variability management The principal goal of modelling variability techniques is to configure a successful software product by managing variability in domain engineering In other words a good method for modelling variability is a prerequisite for a successful SPL On the other hand analysis of the SPL aids the extraction of useful information from the SPL and provides a control and planning strategy mechanism for engineers or experts In addition the analysis of the SPL provides a clear view for users Moreover it ensures the accuracy of the SPL This book presents new techniques for modelling and new methods for SPL analysis

Generative Programming and Component Engineering Gabor Karsai,2004-10-12 This book constitutes the refereed proceedings of the Third International Conference on Generative Programming and Component Engineering GPCE 2004 held in Vancouver Canada in October 2004 The 25 revised full papers presented together with abstracts of 2 invited talks were carefully reviewed and selected from 75 submissions The papers are organized in topical sections on aspect orientation staged programming types for meta programming meta programming model driven approaches product lines and domain specific languages and generation     *Design and Use of Software Architectures* Jan Bosch,2000 A practical guide to designing and implementing software architectures     *Software Product Lines* Patrick Donohoe,2012-12-06 Software product lines are emerging as a critical new paradigm for software development Product lines are enabling organizations to achieve impressive time to market gains and cost reductions With the increasing number of product lines and product line researchers and practitioners the time is right for a comprehensive examination of the issues surrounding the software product line approach The Software Engineering Institute at Carnegie Mellon University is proud to sponsor the first conference on this important subject This book comprises the proceedings of the First Software Product Line Conference SPLC1 held August 28 31 2000 in Denver Colorado USA The twenty seven papers of the conference technical program present research results and experience reports that cover all aspects of software product lines Topics include business issues enabling technologies organizational issues and life cycle issues Emphasis is placed on experiences in the development and fielding of product lines of complex systems especially those that expose problems in the design development or evolution of software product lines The book will be essential reading for researchers and practitioners alike     Software Product Lines Timo Käkölä,Juan Carlos Dueñas,2007-02-07 Between July 1999 and June 2005 a group of European companies

research institutes and universities executed the EUREKA ITEA projects ESAPS CAF and FAMILIES on the topic of product line engineering. The projects originated from the need of the industry to improve software engineering performance by organizing product development in product lines. The results obtained within the projects have been implemented in several large industries e.g. automotive, e-business, medical systems and mobile phones. They involve a radical shift in software construction and production. The most important research results of the projects are collected in this book. Product line engineering was already applied within industry in the 1980s and presumably earlier. In the 1980s good architects in many telecommunications companies based their architectures on the ideas of David Parnas who published on the subject of program families. They were facilitated by the CHILL language widely used by the telecommunications companies. This language deploys the same modularity principles as the Modula programming language family. Modularity is a crucial ingredient for implementing systems with a component based architecture. Being able to compose the products of components is an important mechanism in all product line architectures. In the 1990s the product line ideas started to gain ground in other industries. Around 1995 the company experiences reached the academia and since then people in companies and academia have collaborated widely on this subject. The ESAPS CAF and FAMILIES projects manifest an institutionalized form of this collaboration.
