Specifications of Businesses and Systems Haim Kilov,Bernhard Rumpe,Ian Simmonds,2013-03-09 Behavioral Specifications of Businesses and Systems deals with the reading writing and understanding of specifications The papers

presented in this book describe useful and sometimes elegant concepts good practices in programming and in specifications and solid underlying theory that is of interest and importance to those who deal with increased complexity of business and systems Most concepts have been successfully used in actual industrial projects while others are from the forefront of research Authors include practitioners business thinkers academics and applied mathematicians These seemingly different papers address different aspects of a single problem taming complexity Behavioral Specifications of Businesses and Systems emphasizes simplicity and elegance in specifications without concentrating on particular methodologies languages or tools It shows how to handle complexity and specifically how to succeed in understanding and specifying businesses and systems based upon precise and abstract concepts It promotes reuse of such concepts and of constructs based on them without taking reuse for granted Behavioral Specifications of Businesses and Systems is the second volume of papers based on a series of workshops held alongside ACM's annual conference on Object Oriented Programming Systems Languages and Applications OOPSLA and European Conference on Object Oriented Programming ECOOP The first volume Object Oriented Behavioral Specifications edited by Haim Kilov and William Harvey was published by Kluwer Academic Publishers in 1996

Software Maintenance - A Management Perspective Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have

to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact

Concurrency in Ada Alan Burns, Andy Wellings, 1998-02-19 A major feature of the Ada programming language is the facilities it provides for concurrent programming Alan Burns and Andy Wellings provide here a thorough and self contained account of concurrent programming in Ada and so show users even beginners how to harness the full power of the whole language After giving an overview of the non concurrent features of

Ada the authors proceed to examine in detail the uses of concurrent programming and the inherent difficulties in providing inter process communication The Ada tasking model is then introduced the way it deals with these and related matters is explained in a number of separate chapters covering system programming real time issues distribution object oriented programming and re use This is the first book which deals with concurrent features in the new Ada standard and it offers practical advice to the programmer needing to use it for embedded systems while those interested more broadly in the development of programming languages will find many otherwise inaccessible issues probed in depth It will thus be of value to professional software engineers and advanced students of programming alike indeed every Ada programmer will find it essential reading and a primary reference work For the paperback edition the authors have made revisions throughout the text updating and correcting where appropriate
