This open access book provides an overview of the dissertations of the five nominees for the Ernst Denert Award for Software Engineering in 2022. The prize, kindly sponsored by the Gerlind Ernst Denert Stiftung, is awarded for excellent work within the discipline of Software Engineering, which includes methods, tools, and procedures for better and efficient development of high quality software. An essential requirement for the nominated work is its applicability and usability in industrial practice. The book contains five papers that describe the works by Jannik Fischbach (Netlight Consulting GmbH) and fortiss GmbH (who won the award), entitled "Conditional Statements in Requirements Artifacts: Logical Interpretation, Use Cases for Automated Software Engineering, and Fine Grained Extraction"; Christian Kirchhof (RWTH Aachen University), "From Design to Reality: An Overview of the MontiThings Ecosystem for Model Driven IoT Applications"; Sven Peldszus (Ruhr University Bochum), "research about Security Compliance in Model driven Development of Software Systems in Presence of Long Term Evolution and Variants"; Florian Rademacher (RWTH Aachen University), "work on Model Driven Engineering of Microservice Architectures"; and Alexander Trautsch (University of Passau), "Usefulness of Automatic Static Analysis Tools: Evidence from Four Case Studies". The chapters describe key findings of the respective works, show their relevance and applicability to practice and industrial software engineering projects, and provide additional information and findings that have only been discovered afterwards, e.g., when applying the results in industry. This way, the book is not only interesting to other researchers but also to industrial software professionals who would like to learn about the application of state of the art methods in their daily work. **Software Sustainability** Coral Calero, Ma Ángeles Moraga, Mario Piattini, 2021-10-05. This book focuses on software sustainability, regarded in terms of how software is or can be developed while taking into consideration environmental, social, and economic dimensions. The sixteen chapters cover various related issues, ranging from technical aspects like energy efficient programming techniques, formal proposals related to energy efficiency, measurement patterns to build energy efficient software, the role of developers on energy efficient software systems, and tools for detecting and refactoring code smells, energy bugs, to human aspects like its impact on software sustainability or the adaptation of ACM/IEEE guidelines for student and professional education, and an economics driven architectural evaluation for sustainability. Also, aspects as the elements of governance and management that organizations should consider when implementing, assessing, and improving Green IT, or the relationship between software sustainability and the Corporate Social Responsibility of software companies, are included. The chapters are complemented by usage scenarios and experience reports on several domains, as cloud applications, agile development, or e Health, among others. As a whole, the chapters provide a complete overview of the various

issues related to sustainable software development The target readership for this book includes CxOs e g Chief Information Officers Chief Executive Officers Chief Technology Officers etc software developers software managers auditors business owners and quality professionals It is also intended for students of software engineering and information systems and software researchers who want to know the state of the art regarding software sustainability
