testing and prototyping The final part describes the techniques and standards which are relevant in producing particular classes of application The text will be of great use to software engineers software project managers and students of computer science

*Metrics For Software Conceptual Models* Marcela Genero, Mario Piattini, Coral Calero, 2005-01-04 The idea that measuring quality is the key to developing high quality software systems is gaining relevance Moreover it is widely recognised that the key to obtaining better software systems is to measure the quality characteristics of early artefacts produced at the conceptual modelling phase Therefore improving the quality of conceptual models is a major step towards the improvement of software system development Since the 1970s software engineers had been proposing high quantities of metrics for software products processes and resources but had not been paying any special attention to conceptual modelling By the mid 1990s however the need for metrics for conceptual modelling had emerged This book provides an overview of the most relevant existing proposals of metrics for conceptual models covering conceptual models for both products and processes

Systems Engineering of Software-Enabled Systems Richard E. Fairley, 2019-07-30 A comprehensive review of the life cycle processes methods and techniques used to develop and modify software enabled systems Systems Engineering of Software Enabled Systems offers an authoritative review of the most current methods and techniques that can improve the links between systems engineering and software engineering The author a noted expert on the topic offers an introduction to systems engineering and software engineering and presents the issues caused by the differences between the two during development process The book reviews the traditional approaches used by systems engineers and software engineers and explores how they differ The book presents an approach to developing software enabled systems that integrates the incremental approach used by systems engineers and the iterative approach used by software engineers This unique approach is based on developing system capabilities that will provide the features behaviors and quality attributes needed by stakeholders based on model based system architecture In addition the author covers the management activities that a systems engineer or software engineer must engage in to manage and lead the technical work to be done This important book Offers an approach to improving the process of working with systems engineers and software engineers Contains information on the planning and estimating measuring and controlling managing risk and organizing and leading systems engineering teams Includes a discussion of the key points of each chapter and exercises for review Suggests numerous references that provide additional readings for development of software enabled physical systems Provides two case studies as running examples throughout the text Written for advanced undergraduates graduate students and practitioners Systems Engineering of Software Enabled Systems offers a comprehensive resource to the traditional and current techniques that can improve the links between systems engineering and software engineering

Implementing the Stakeholder-based Goal-Question-Metric (GQM) Measurement Model for Software Projects Dr. Prashanth Harish Southekal, 2014-06-25. Software projects today are often characterized by poor quality, schedule overruns, and high costs. One of the approaches to address the poor success rate is to track the project progress with a stakeholder-driven measurement model that is objective and validated theoretically and empirically. In this backdrop, based on the Goal-Question-Metric (GQM) model, this book proposes a generic and objective measurement model for a software project with eight key measures based on the value propositions of the stakeholders. The measurement model is validated i) theoretically with measurement theory criteria and ii) empirically with case studies and a global survey representing IT industry practitioners.

Software Engineering and Knowledge Engineering: Theory and Practice Yanwen Wu, 2012-01-15. The volume includes a set of selected papers extended and revised from the I2009 Pacific Asia Conference on Knowledge Engineering and Software Engineering KESE 2009, which was held on December 19-20, 2009, in Shenzhen, China. Volume 1 is to provide a forum for researchers, educators, engineers, and government officials involved in the general areas of Computer and Software Engineering to disseminate their latest research results and exchange views on the future research directions of these fields. 140 high-quality papers are included in the volume. Each paper has been peer-reviewed by at least 2 program committee members and selected by the volume editor Prof. Yanwen Wu. On behalf of this volume, we would like to express our sincere appreciation to all of the authors and referees for their efforts reviewing the papers. Hoping you can find lots of profound research ideas and results on the related fields of Computer and Software Engineering.

Software Project Management in Practice Pankaj Jalote, 2005.

**Towards a Software Factory** M. Van Genuchten, 2012-12-06. The subject of this book is the control of software engineering. The rapidly increasing demand for software is accompanied by a growth in the number of products on the market as well as their size and complexity. Our ability to control software engineering is hardly keeping pace with this growth. As a result, software projects are often late, software products sometimes lack the required quality, and the productivity improvements achieved by software engineering are insufficient to keep up with the demand. This book describes ways to improve software engineering control. It argues that this should be expanded to include control of the development, maintenance, and reuse of software, thus making it possible to

apply many of the ideas and concepts that originate in production control and quality control The book is based on research and experience accumulated over a number of years During this period I had two employers Eindhoven University of Technology and Philips Electronics Research is not a one man activity and I would like to thank the following persons for their contributions to the successful completion of this project First and foremost my Ph D advisers Theo Bemelmans Hans van Vliet and Fred Heemstra whose insights and experience proved invaluable at every stage Many thanks are also due to Rob Kusters and Fred Heemstra for their patience in listening to my sometimes wild ideas and for being such excellent colleagues
