Handbook of Systems Engineering and Analysis of Electro-Optical and Infrared Systems

William Wolfgang Arrasmith, 2025-06-30 There has been a lot of innovation in systems engineering and some fundamental advances in the field of optics imaging lasers and photonics that warrant attention This volume focuses on applications tools and techniques of systems engineering related topics from government industrial and academic settings such as development and operations DevOps agile methods and the concept of the digital twin Handbook of Systems Engineering and Analysis of Electro Optical and Infrared Systems Applications Tools and Techniques offers more information on the application of decision and risk analysis and statistical methods in systems engineering such as design of experiments DOX methods including statistical process control hypothesis testing analysis of variance blocking 2k factorial analysis and regression analysis It includes new material using model based systems engineering and systems architecture methods in a system level design application The integration of recent high speed atmospheric turbulence research results in the optical technical examples and case studies

to illustrate the new developments is also included A presentation of new optical technical materials for adaptive optics AO and atmospheric turbulence compensation ATC systems that are based on illumination from passive sources natural light or active sources coherent light like from lasers provides the technical focus for the systems engineering methods and techniques Chapter 13 focuses on the technical aspects of the design process and uses the systems level design as an illustration In addition to covering lifecycle cost estimation methods and applying them to an integrated case study that is used to illustrate important concepts and techniques throughout this work the final section brings everything together in terms of technical cost and schedule performance Because this volume blends modern day systems engineering methods with detailed optical systems analysis and applies these methodologies to EO IR systems this new edition is an excellent text for professionals in STEM disciplines that work with optical or infrared systems It is also a great practical reference text for the practicing engineer and a solid educational text for graduate level systems engineering engineering science and technology students

Software Engineering Approaches for Offshore and Outsourced Development Olly Gotel, Mathai Joseph, Bertrand Meyer, 2009-07-01

SEAFOOD 2009 Enabling Global Partnerships to Deliver on Business Needs Companies have been outsourcing areas of software development work for many years either because of the engineering challenges or because the outsourced aspect is not central to their core business A profound transformation has been affecting this model over recent years a massive transfer of development activities from the USA and Europe to a skilled labor force in service providing countries This transformation has been driven by the demands of a global business climate seeking to increase the value delivery of IT investment However the ability to realize this value can prove problematic in practice Of particular concern are the hidden costs of globally distributed models of working such as understanding and communicating the true business needs across organizational and cultural boundaries To address such issues offshore outsourcing requires different support from in house development and this means adapting familiar techniques processes and tools to this setting as well as perhaps creating innovative new ones Coupled with this industry transformation there is hence a pressing need to re-examine those software engineering approaches that either facilitate or impede this model of working With an inevitable focus on the economy in 2009 business decisions regarding the sourcing of software development projects will come under close scrutiny It will become increasingly critical to design global partnerships that both clarify cost benefits and enable delivery on business needs
