Ibrahim Mirsal,2008-10-26 Despite having been published about two years ago for the first time the continuous demand for this book encouraged me to prepare this revised and enlarged edition Many parts of the text have been rewritten type errors traced and corrected and the bibliography largely modified to include many of the references published about the subject of soil pollution in the previous ten years I should like to express my thanks to the staff of Springer Verlag Heidelberg for their cooperative efforts in preparing this edition I also would like to thank Mr Michael Sidwell B A for the extreme but characteristic care with which he read and revised the proofs I hope that in this new edition the book may continue to serve the needs of students and professionals alike interested in the subject of soil pollution Ibrahim A Mirsal Preface to the First Edition Whoever has enjoyed following the legendary duel between the Egyptian Pharaoh and his magicians Alchemists on one side and Moses and his brother Aaron on the other as is vividly narrated in the Bible must have realised that people at least those living at or near the eternal battlefields of the Middle East have always had knowledge about the terrible consequences of soil pollution by chemicals This knowledge must have existed long before Moses and his Pharaoh Nobody knows when people became aware of this yet it must have been born in very early times reaching back to the dawn of human conscious Relating the South African soil taxonomy to the World Reference Base for soil resources CW van

Huyssteen,2020-12-20 The South African Taxonomic soil classification system SAT is well established and utilised in South Africa However it is not internationally well known and therefore the need arose to provide a tool by which South African soil taxonomists can convert South African soil classifications and profile descriptions to the international classifications of the World Reference Base WRB for soil resources The diagnostics and tacit knowledge presented in this publication are therefore based on the SAT and the WRB When necessary further substantiation was derived from the Land Type Survey of South Africa The adopted procedure is effective in providing a reasonable classification based on the South African soil forms and families while excluding certain WRB soil groups and qualifiers because these are irrelevant to South African taxonomy Lastly this publication also highlights some peculiarities omissions and inconsistencies observed between the SAT and WRB

Lal,B. A. Stewart,2019-07-09 Soil degradation is a widespread problem in Africa resulting in decreased agricultural
productivity while demand for food continues to increase Degradation is caused by accelerated erosion acidification
contamination depletion of soil organic matter and plant nutrients and salinization The major cause of soil degradation in
Africa is uncontrolled and excessive grazing in the savanna regions followed by deforestation and the use of inappropriate
and extractive farming practices Perpetual neglect of the health of soils in Africa can exacerbate the already serious
problems of food and nutritional insecurity and environmental degradation Food and nutritional security of the growing
population of Africa can only be achieved if degraded soils are restored and soils of agroecosystems are managed prudently
and sustainably Ignoring soils and taking the fragile finite and precious soil resources for granted is the principal cause of
poverty hunger and environmental degradation The downward spiral must be reversed through soil restoration measures
based on translating science into action This book describes the soils of Africa processes of soil degradation extent and
severity of soil degradation and the impacts of degradation processes on food and nutritional security Features Explores the
extent and severity of soil degradation in Africa Analyzes the cause effect relationship between anthropogenic activities and
soil degradation Reviews processes of soil degradation in Africa including erosion salinization nutrient depletion and decline
of soil organic matter Addresses the effect of climate change on soil degradation in Africa Explains how soil degradation

causes food and nutritional insecurity Part of the Advances in Soil Sciences series this volume is specifically devoted to the processes and factors that cause soil degradation and the challenges and potential for remediation and restoration of soil health in Africa
