Olgyay and Olgyay, 1957 *Elements of Sustainable Architecture* Rosa Urbano Gutiérrez, Laura de la Plaza Hidalgo, 2019-12-06 For sustainable architecture to become a reality the way we design buildings needs to change Many architects are concerned that sustainable technologies may interfere with a building's aesthetic appearance and so these are often added on once the design process is complete Elements of Sustainable Architecture solves this dilemma by helping students to develop the design skills they need to create sustainable buildings ensuring that ecological considerations are applied throughout the design process Restoring the primacy of aesthetics and creativity to sustainable design the book focuses on strategies that have the greatest impact on building design It also shows the influence of sustainability considerations on choices about aspects such as composition form space tectonics materials colour textures proportion and position Specifically designed to offer a new way of understanding architecture the book introduces students to the basic

principles and methods of sustainable design features current examples and inspiring case studies to support learning step by step presents information in a visually appealing intuitive easy to understand way includes over 500 high quality colour diagrams drawings sketches and photographs A clear visual introduction to creating aesthetically beautiful and sustainable buildings this is essential reading for students in sustainable architecture courses **Solar control and shading devices**

Victor Olgyay,1976 Passive Energy Strategies for Mediterranean Residential Buildings Aurora Monge-Barrio,Ana Sánchez-Ostiz Gutiérrez,2018-02-09 This book presents an approach to energy efficient building design which takes into account the most important challenges in climate change mitigation and adaptation in Southern Europe It outlines a specific approach related to residential buildings and their intergenerational and vulnerable occupants such as ageing population and users in fuel poverty It also focuses on the use of passive energy measures throughout the year and on pursuing a realistic and affordable approach to the efficient rehabilitation of resilient residential buildings In addition the book presents case studies that include surveys monitoring and simulation of residential buildings in Spain and other Southern European representative locations in order to go further on the study of this challenging topic Overhang Design Methods Sanja Stevanovic,2022-09-08 It is estimated that windows in office buildings are responsible for one third of energy used for their heating and cooling Designing window shading that balances often contradictory goals of preventing excessive heat gains in hot periods without compromising beneficial heat gains in cold periods or visual comfort in indoor spaces of modern buildings with highly glazed facades is an interesting multi objective optimisation problem that represents an active research topic in the field of building energy and daylighting Window overhangs are the simplest and most traditional shading devices that are easy to install highly cost effective require low or no maintenance and offer unobstructed views outside This book provides a review of overhang design methods for optimal thermal and daylighting performance It starts with a historical overview of methods based on solar positions and shading masks Next it discusses current research methodology including shading calculation methods ways of quantifying thermal and daylighting overhang effectiveness and the use of multi objective optimisation approaches together with the case studies that employ them It further covers methods for designing innovative overhang types such as NURBS outlined overhangs and PV integrated dynamic overhangs The appendix classifies published overhang case studies according to major climate type and latitude of their locations As such the book presents a valuable resource for understanding subtle nuances of interaction between solar radiation shading devices and indoor comfort The intended target audience are building energy researchers interested in optimisation of window shading devices
