Danny Harvey, 2012-08-21 Winner of Choice Magazine Outstanding Academic Titles for 2007 Buildings account for over one third of global energy use and associated greenhouse gas emissions worldwide Reducing energy use by buildings is therefore an essential part of any strategy to reduce greenhouse gas emissions and thereby lessen the likelihood of potentially catastrophic climate change Bringing together a wealth of hard to obtain information on energy use and energy efficiency in buildings at a level which can be easily digested and applied Danny Harvey offers a comprehensive objective and critical sourcebook on low energy buildings Topics covered include thermal envelopes heating cooling heat pumps HVAC systems hot water lighting solar energy appliances and office equipment embodied energy buildings as systems and community integrated energy systems cogeneration district heating and district cooling The book includes exemplary buildings and techniques from North America Europe and Asia and combines a broad holistic perspective with technical detail in an accessible and insightful manner      *Integration of Alternative Sources of Energy* Felix A. Farret, M. Godoy Simoes, 2006-04-20 A unique electrical engineering approach to alternative sources of energy Unlike other books that deal with alternative sources of energy from a mechanical point of view *Integration of Alternative Sources of Energy* takes an electrical engineering perspective Moreover the authors examine the full spectrum of alternative and renewable energy with the goal of developing viable methods of integrating energy sources and storage efficiently Readers become thoroughly conversant with the principles possibilities and limits of alternative and renewable energy The book begins with a general introduction and then reviews principles of thermodynamics Next the authors explore both common and up and coming alternative energy sources including hydro wind solar photovoltaic thermosolar fuel cells and biomass Following that are discussions of microturbines and induction generators as well as a special chapter dedicated to energy storage systems After setting forth the fundamentals the authors focus on how to integrate the various energy sources for electrical power production Discussions related to system operation maintenance and management as well as standards for interconnection are also set forth Throughout the book diagrams are provided to demonstrate the electrical operation of all the systems that are presented In addition extensive use of examples helps readers better grasp how integration of alternative energy sources can be accomplished The final chapter gives readers the opportunity to learn about the HOMER Micropower Optimization Model This computer model developed by the National Renewable Energy Laboratory NREL assists in the design of micropower systems and facilitates comparisons of power generation techniques Readers can download the software from the NREL Web site This book is a must read for engineers consultants regulators

and environmentalists involved in energy production and delivery helping them evaluate alternative energy sources and integrate them into an efficient energy delivery system. It is also a superior textbook for upper level undergraduates and graduate students. *Directory of Published Proceedings*, 2002 **Index of Conference Proceedings** British Library. Document Supply Centre, 2001 **Integration of Renewable Sources of Energy** Felix A. Farret, M. Godoy Simoes, 2017-06-06 The latest tools and techniques for addressing the challenges of 21st century power generation renewable sources and distribution systems Renewable energy technologies and systems are advancing by leaps and bounds and it is only a matter of time before renewables replace fossil fuel and nuclear energy sources. Written for practicing engineers, researchers, and students alike, this book discusses state of the art mathematical and engineering tools for the modeling, simulation, and control of renewable and mixed energy systems and related power electronics. Computational methods for multi domain modeling of integrated energy systems and the solution of power electronics engineering problems are described in detail. Chapters follow a consistent format featuring a brief introduction to the theoretical background, a description of problems to be solved, as well as objectives to be achieved. Multiple block diagrams, electrical circuits, and mathematical analysis and/or computer code are provided throughout. And each chapter concludes with discussions of lessons learned, recommendations for further studies, and suggestions for experimental work. Key topics covered in detail include: Integration of the most usual sources of electrical power and related thermal systems; Equations for energy systems and power electronics focusing on state space and power circuit oriented simulations; MATLAB and Simulink models and functions and their interactions with real world implementations using microprocessors and microcontrollers; Numerical integration techniques; transfer function modeling; harmonic analysis and power quality performance assessment; MATLAB Simulink Power Systems Toolbox and PSIM for the simulation of power electronic circuits including for renewable energy sources such as wind and solar sources. Written by distinguished experts in the field, *Integration of Renewable Sources of Energy* 2nd Edition is a valuable working resource for practicing engineers interested in power electronics, power systems, power quality, and alternative or renewable energy. It is also a valuable text reference for undergraduate and graduate electrical engineering students. Engineer Update, 1979 *The Electric Power Engineering Handbook - Five Volume Set* Leonard L. Grigsby, 2018-12-14 The *Electric Power Engineering Handbook* Third Edition updates coverage of recent developments and rapid technological growth in crucial aspects of power systems including protection, dynamics, and stability, operation, and control.
