Recycling and the Politics of Urban Waste Matthew Gandy, 2014-06-03 The affluence of western society has given rise to unprecedented quantities of waste presenting one of the most intractable environmental problems for contemporary society This book examines recycling and municipal waste management in three major cities London New York and Hamburg A range of political and economic issues are examined to illustrate how any reduction in the size of the waste stream in order to achieve more equitable and environmentally sustainable patterns of resource use is incompatible with the current emphasis in the use of the market for environmental protection The case

studies show how contrary to the hopes of many environmentalists and policy makers municipal waste management is moving steadily towards the profitable option of incineration with energy recovery rather than the recycling of materials or waste reduction at source. The evidence suggests that the achievement of a more sustainable pattern of recycling and waste management policy would demand a fundamental change in public policy to give government a more active role in environmental protection.

Integrated Approaches Towards Solid Waste Management Ajay S. Kalamdhad, 2021-06-23

In the developing countries pollution through solid waste sludge from water and wastewater treatment plants and pollution of natural water resources have become one of the grave issues. The root cause is population explosion, industrialization, urbanization and other anthropogenic activities. The increase rate of solid waste has become a major challenge for sustainable development of the environment. Poor management of solid waste and sludge from water and wastewater treatment plants may be the cause of health hazards and environmental problems. The book presents new methods and technologies to combat the aforementioned problems and focuses on the importance of using the recycled products. The technologies related to waste and sludge treatment are economical, eco friendly and bring economic returns and can be applied to most of the developing countries where waste treatment technologies viz composting, anaerobic digestion, recycling of plastic and agricultural waste in construction can be used. The aim of the book is to support everyone who is involved in academics, teaching, research related to solid waste management and water and wastewater treatment study in the leading academic and research organizations globally. This book will be of prodigious value to upcoming researchers, scholars, scientists and professionals in Environmental Science and Engineering fields and global and local authorities and policy makers responsible for the management of solid wastes and sludge.
