The First Sourcebook on Asian Research in Mathematics Education - 2 Volumes Bharath Sriraman, Jinfa Cai, Kyeonghwa Lee, Lianghuo Fan, Yoshinori Shimizu, Chap Sam Lim, K. Subramaniam, 2015-08-01 Mathematics and Science education have both grown in fertile directions in different geographic regions Yet the mainstream discourse in international handbooks does not lend voice to developments in cognition curriculum teacher development assessment policy and implementation of mathematics and science in many countries Paradoxically in spite of advances in information technology and the flat earth syndrome old distinctions and biases between different groups of researchers persist In addition limited accessibility to conferences and journals also contribute to this problem The International Sourcebooks in Mathematics and Science Education focus on underrepresented regions of the world and provides a platform for researchers to showcase their research and development in areas within mathematics and science education The First Sourcebook on Asian Research in Mathematics Education China Korea Singapore Japan Malaysia and India provides the first synthesized treatment of mathematics education that has both developed and is now prominently emerging in the Asian and South Asian world The book is organized in sections coordinated by leaders in mathematics education in these countries and editorial teams for each country affiliated with them The purpose of unique sourcebook is to both consolidate and survey the established body of research in these countries with findings that have influenced ongoing research agendas and informed practices in Europe North America and other countries in addition to serving as a platform to showcase existing research that has shaped teacher education curricula and policy in these Asian countries The book will serve as a standard reference for mathematics education researchers policy makers practitioners and students both in and outside Asia and complement the Nordic and NCTM perspectives

Handbook on the History of Mathematics Education Alexander Karp, Gert Schubring, 2014-01-25 This is the first comprehensive International Handbook on the History of Mathematics Education covering a wide spectrum of epochs and civilizations countries and cultures Until now much of the research into the rich and varied history of mathematics education has remained inaccessible to the vast majority of scholars not least because it has been written in the language and for readers of an individual country And yet a historical overview however brief has become an indispensable element of nearly every dissertation and scholarly article This handbook provides for the first time a comprehensive and systematic aid for researchers around the world in finding the information they need about historical developments in mathematics education not only in their own countries but globally as well Although written primarily for mathematics educators this handbook will also be of interest to researchers of the history of education in general as well as specialists in cultural and even social history

Learning David Bertolo,2016-07-14 Over the last few years multi touch mobile devices have become increasingly common
 However very few applications in the context of 3D geometry learning can be found in app stores Manipulating a 3D scene
 with a 2D device is the main difficulty of such applications Throughout this book the author focuses on allowing young
 students to manipulate observe and modify 3D scenes using new technologies brought about by digital tablets Through a
 user centered approach the author proposes a grammar of interactions adapted to young learners and then evaluates
 acceptability ease of use and ease of learning of the interactions proposed Finally the author studies in situ the pedagogic
 benefits of the use of tablets with an app based on the suggested grammar The results show that students are able to
 manipulate observe and modify 3D scenes using an adapted set of interactions Moreover in the context of 3D geometry
 learning a significant contribution has been observed in two classes when students use such an application The approach
 here focuses on interactions with digital tablets to increase learning rather than on technology First defining which
 interactions allow pupils to realize tasks needed in the learning process then evaluating the impact of these interactions on
 the learning process This is the first time that both interactions and the learning process have been taken into account at the
