Word Problems-Detailed Explanations of Reasoning and Solving Strategies Bill S Lee, 2013-12. This is the answer key of Volume 8 of the entire set of 12 volumes of word problems solving strategies. If you want to set a solid foundation in math grasping the techniques on solving word problems is the key to it. This set of books teaches you the techniques and strategies you need to solve word problems. Sample question in this volume: A lion can live up to 40 years and an elephant can live twice as long. If a sea turtle can live 20 years more than twice as long as the elephant, how many years can the sea turtle live up to? Reasoning and solution: Twice 2 groups of so we can use the 3 elements formulas to solve for one of the elements. An elephant can live twice as long as a lion 40 years so the number of years that a lion can live to is the amount in 1 group. The number of groups is 2. We multiply the number of groups 2 with the amount in each group 40 years to find the total amount in the groups or the number of years that the elephant can live up to $2 \times 40 = 80$ years. A sea turtle can live up to 20 years more than twice as long as the elephant. We need to first find the amount that is twice as much as the elephant's age. The amount in 1 group is the age of the elephant. The number of groups is 2. Twice 2 groups of so we can use the 3 elements formulas to solve for one of the elements.
