Knowledge and Interaction Andrea A. diSessa,Mariana Levin,Nathaniel J.S. Brown,2015-12-07 Decades of research in the cognitive and learning sciences have led to a growing recognition of the incredibly multi faceted nature of human knowing and learning Up to now this multifaceted nature has been visible mostly in distinct and often competing communities of researchers From a purely scientific perspective siloed science where different traditions refuse to speak with one another or merely ignore one another is unacceptable This ambitious volume attempts to kick start a serious new line of work that merges or properly articulates different traditions with their divergent historical theoretical and

methodological commitments that nonetheless both focus on the highly detailed analysis of processes of knowing and learning as they unfold in interactional contexts in real time Knowledge and Interaction puts two traditions in dialogue with one another Knowledge Analysis KA which draws on intellectual roots in developmental psychology and cognitive modeling and focuses on the nature and form of individual knowledge systems and Interaction Analysis IA which has been prominent in approaches that seek to understand and explain learning as a sequence of real time moves by individuals as they interact with interlocutors learning environments and the world around them The volume s four part organization opens up space for both substantive contributions on areas of conceptual and empirical work as well as opportunities for reflection integration and coordination

Learning with Understanding in the Chemistry Classroom Iztok Devetak, Saša Aleksij Glazar, 2014-01-14 This volume offers a critical examination of a variety of conceptual approaches to teaching and learning chemistry in the school classroom Presenting up to date research and theory and featuring contributions by respected academics on several continents it explores ways of making knowledge meaningful and relevant to students as well as strategies for effectively communicating the core concepts essential for developing a robust understanding of the subject Structured in three sections the contents deal first with teaching and learning chemistry discussing general issues and pedagogical strategies using macro sub micro and symbolic representations of chemical concepts Researchers also describe new and productive teaching strategies The second section examines specific approaches that foster learning with understanding focusing on techniques such as cooperative learning presentations laboratory activities multimedia simulations and role playing in forensic chemistry classes The final part of the book details learner centered active chemistry learning methods active computer aided learning and trainee chemistry teachers use of student centered learning during their pre service education Comprehensive and highly relevant this new publication makes a significant contribution to the continuing task of making chemistry classes engaging and effective
