Vesting, 2012-12-06 Current therapies for most human genetic diseases are inadequate In response to the need for effective treatments modern molecular genetics is providing tools for an unprecedented new approach to the treatment of diseases e g the direct manipulation of mutant genes or the input on new therapeutic genes The treatment of human disease by gene transfer has now moved from the theoretical to the practical realm With the initiation of clinical trials involving somatic gene therapy in different countries a critical assessment of the different aspects involved with this new technique is necessary This volume provides an overview on all these interdisciplinary aspects by some well known experts all over the world **The Ethics of Human Gene Therapy** LeRoy Walters, Julie Gage Palmer, 1997 The authors of this absorbing new book describe the science of gene therapy in terms easily accessible to the non specialist and focus on the controversial ethical and public policy issues surrounding human interventions in human heredity After a brief survey of the structure and functions of DNA genes and cells Walters and Palmer discuss three major types of potential genetic intervention somatic cell gene therapy germ line gene therapy and genetic enhancements They start with the current techniques of gene addition using non reproductive somatic cells in an effort to cure or treat disease Next they address the technical problems and moral issues facing attempts to prevent disease through genetically modifying early human embryos or sperm and egg cells These changes would be passed on to future generations Chapter 4 in many ways the most original part of this volume confronts the issue of employing genetic means to improve human abilities and appearance Depending on the techniques employed such enhancements could affect not only the individuals receiving the intervention but their offspring as well Three types of genetic enhancements are considered physical alterations to improve size reduce the need for sleep and decelerate aging intellectual enhancements of memory and general cognitive ability and moral enhancements for control of violently aggressive behavior The authors maintain that genetic modifications should be evaluated individually rather than be condemned in principle or as a group The final chapter summarizes the public review process that human gene therapy proposals have been undergoing in the United States since 1990 Five appendices providing technical background information along with a complete list of questions raised in the
