Allocation and Sex Change Marc Mangel, 1990-10-26 The seven articles in this volume are based on lectures presented at the annual symposium Some Mathematical Questions in Biology held in conjunction with the American Institute of Biological Sciences meeting in Toronto Ontario in August 1989 Sexual selection sex determination and sex allocation have been at the center of evolutionary ecology since its inception and have played an important role in the development of many concepts As this volume demonstrates many key questions remain to be investigated through a combination of empirical and theoretical work In addition questions of sex provide a natural mechanism for crossing the great taxonomic divide by allowing plant and animal researchers to focus on similar kinds of questions using a wide variety of organisms *Dynamical Systems - Warwick* 1974 A. Boi,2005-11-02 The collection of papers forming this volume is intended to provide a deeper study of some mathematical and physical subjects which are at the core of recent developments in the natural and living sciences The book explores some far reaching interfaces where mathematics theoretical physics and natural sciences seem to interact profoundly The main goal is to show that an accomplished movement of geometrisation has enabled the discovery of a great variety of amazing structures and behaviors in physical reality and in living matter The diverse group of expert mathematicians physicists and natural scientists present numerous new results and original ideas methods and techniques Both academic and interdisciplinary the book investigates a number of important connections between mathematics theoretical physics and natural sciences
