Web Services Unleashed Robert J. Brunner,2002 This text provides Java developers with in depth coverage of Web Services technology It includes contributions from recognised Web Services experts and architects including the Web Services team at IBM *BEA WebLogic Workshop* Joe Weber,Mark Wutka,2003 BEA WebLogic Workshop is a rapid application development tool that makes building Java based Web service applications simple With just a basic foundation of Java programming you can use WebLogic Workshop to develop Web services BEA WebLogic Workshop Kick Start provides everything you need to get started with WebLogic Workshop including a quick Java primer and appendixes covering the essentials of XML SOAP and WSDL Learn the features of WebLogic Workshop and review hundreds of code examples and explore the inner workings of this new tool The book s CD ROM contains all the source code and examples from the book plus a 90 day trial version of BEA WebLogic Platform which includes WebLogic Workshop Foreword Web services have attracted much attention recently as the next big thing in computing technology Vendors of all shapes and sizes have announced their

support for Web services technologies and every month a new Web services conference is popping up somewhere on the globe. With all this hype and attention, sometimes it's difficult to really discover what Web services are, where they fit in your company, what the business case is, and how you can actually get started taking advantage of this technology. BEA has been working with customers to answer many of these questions and provide solutions that enable companies to easily construct Web services that meet their needs today. Contrary to the common conception of Web services as a consumer-focused technology, Web services may have the greatest potential as a technology inside enterprises as a new way of tying disparate applications together using standards-based technologies. To make Web services really work in the enterprise, however, it's essential that they meet core enterprise requirements. Web services applications have to exist in a constantly changing IT environment where different applications are built and modified by different people on different schedules. They must accommodate everything from modern J2EE-based applications to legacy systems to applications at business partners. They must be able to handle rich and complex information and transmit it between internal and external applications. They must easily interact with other applications to leverage existing investments. They must be robust, reliable, and they must perform. Perhaps most important of all, they have to be easy to build. For Web services to flourish within an organization, all developers will need to be able to build Web services that meet these requirements. BEA WebLogic Workshop Kick Start introduces you to BEA's new WebLogic Workshop product, a development tool and runtime framework that makes it easy to build powerful Web services that take advantage of the robust enterprise features of the WebLogic J2EE application server. WebLogic Workshop provides a graphical tool that makes it easy to visualize, develop, and test Web service applications and visual controls that dramatically simplify access to existing resources like databases, packaged applications, Enterprise Java Beans, and other Web services. The Workshop framework provides out-of-the-box support for building Web services that are loosely coupled so that the internal implementation details of an application can be cleanly separated from the public contract that a Web service offers to other applications. This makes Workshop Web services flexible in the face of a constantly changing IT environment. Workshop also provides built-in support for asynchronous messaging so that Web service applications can carry on rich two-way conversations with their clients and accommodate interaction with legacy systems and human users. Finally, Workshop supports easy manipulation of coarse-grained messages so that rich documents can be handled without resorting to tedious XML DOM programming. All of these capabilities can be accessed in a simple declarative fashion that enables all developers, not just J2EE experts, to get started building Web services today. Even if you are new to the Java programming language or have never built a J2EE application before, I think you'll be surprised how easy it is to get started with Workshop. Working inside the WebLogic Workshop environment, you can focus on the procedural business code that is important to getting your applications built and leave all of the details of Web service and J2EE plumbing to the application framework. BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general and teach you the few Java and

J2EE concepts you all need to know along the way Rich with examples this book illustrates the power of Web services and will help you realize the value they can bring to your company Carl Sjogreen Product Manager WebLogic Workshop BEA Systems Inc

JavaServer Pages Hans Bergsten, 2003-12-11 JavaServer Pages JSP has built a huge following since the release of JSP 1.0 in 1999 providing Enterprise Java developers with a flexible tool for the development of dynamic web sites and web applications While new point releases over the years along with the introduction of the JSP Standard Tag Library JSTL have incrementally improved the rough areas of the first version of the JSP specification JSP 2.0 takes this technology to new heights JavaServer Pages Third Edition is completely revised and updated to cover the JSP 2.0 and JSTL 1.1 specifications It includes detailed coverage of the Expression Language EL incorporated into JSP 2.0 the JSTL 1.1 tag libraries and the new function library the new tag file format that enables custom tag library development without Java code the simplified Java tag library API improvements in the JSP XML syntax and more Further it details setup of the Apache Tomcat server JSP and JSTL syntax and features error handling and debugging authentication and personalization database access XML processing and internationalization This book recognizes the different needs of the two groups of professionals who want to learn JSP page authors interested in using JSP elements in web pages and programmers concerned with learning the JSP API and using JSP effectively as a part of an enterprise application If you're in the first group you'll learn from the practical web application examples in the second part of the book If you're in the latter group you'll appreciate the detailed coverage of advanced topics in the third part such as how to integrate servlets and JavaBeans components with JSP using the popular Apache Struts MVC framework and how to develop custom tag libraries using the JSP API with realistic examples that you can use as a springboard for your own libraries Hans Bergsten a JSP expert group veteran and one of our most active contributors has thoroughly and accurately captured the new features of JSP 2.0 and JSTL 1.1 in a way that is well organized and easy to understand With excellent to the point examples this book is a must have for any serious JSP 2.0 developer Mark Roth JSP 2.0 Specification Lead Sun Microsystems Inc Hans Bergsten is the founder of Gefion Software a company focused on Java services and products based on J2EE technologies Hans has been an active participant in the working groups for both the servlet and JSP specifications since their inception and contributes to other related JCP specifications such as JSP Standard Tag Library JSTL and JavaServer Faces JSF and as one of the initial members of the Apache Jakarta Project Management Committee helped develop the Apache Tomcat reference implementation for the servlet and JSP specifications

Using Enterprise JavaBeans 2.0 Chuck Cavaness, Brian Keeton, 2002 Special Edition Using EJB 2.0 starts with a description of how EJB fits into the big picture of J2EE development then covers such topics as Locating EJBs using JNDI Managing data with EJB Query Language Building JMS applications using the new Message driven Bean Planning EJB applications using design patterns Later chapters describe advanced development topics including interoperability horizontal services and clustering Throughout the book the authors construct a component based auction web site using the J2EE architecture as a practical
