Specification And Validation Methods:

Software Specification Methods Marc Frappier, Henri Habrias, 2012-12-06 Objectives of this Book This book is an introduction to a set of software specification methods Its targeted audience are readers who do not wish to read pages of definitions in order to understand the basics of a method The same case study is used to introduce each method following a rigorously uniform presentation format Special care has been devoted to ensure that specifications do not deviate from the case study text As much as the method allows what is specified is what appears in the case study text The benefits are two fold First the reader can easily switch from one method to another using his knowledge of the case study as a leverage to understand a new method Second it becomes easier to compare methods because the same behavior is specified in each case Each method presentation follows the same pattern The concepts are progressively introduced when they are needed To illustrate the specification process questions that the specifier should raise during the analysis of the case study are stated Answers are provided as if they were given by an imaginary client The question answer process guides the derivation of the specification Interestingly the questions raised depend on the method which is illustrative of the differences between them
