Spectral Evolution Of Galaxies:

Spectral Evolution of Galaxies C. Chiosi, Alvio Renzini, 2012-12-06 As it was said by one of the participants to this workshop In our attempts to understand the spectral evolution of galaxies we are fortunate indeed to have the ability to look back in time and observe galaxies as they were billions of years ago Perhaps in no other discipline is it possible to gain such a direct view to history The galaxies we seek to study are remote their light faint and thus only recently has it become technically feasible to sample the spectra of normal luminosity galaxies at lookback times of five billion years or more or perhaps even to see galaxies in the process of their formation or shortly afterwards This fourth workshop organized by the Advanced School of Astronomy was indeed centered on the Spectral Evolution of Galaxies on reviewing and discussing the relevant astrophysical processes and on assessing our current ability to model and understand the evolution of stellar populations Following an opening session dealing with some outstanding questions of galaxy evolution Session I addressed the specific problems of galaxy and star formation processes topics of uncertainty and controversy to which IRAS observations may give novel perspectives The properties of stellar populations in the local group of galaxies formed the basis of Session II Session III dealt with the fundamentals of the theory of spectral and photometrical evolution of stellar populations and with recent developments in the theory of stellar structure a necessary step to model and understand galactic evolution
