The Spectral Energy Distributions of Gas-Rich Galaxies Cristina C. Popescu, Richard J. Tuffs, 2005-04-28 Heidelberg Germany 4 8 October 2004 *Star-Formation Rates of Galaxies* Andreas Zezas, Véronique Buat, 2021-04-29 Star formation is one of the key processes that shape the current state and evolution of galaxies This volume provides a comprehensive presentation of the different methods used to measure the intensity of recent or on going star forming activity in galaxies discussing their advantages and complications in detail It includes a thorough overview of the theoretical underpinnings of star formation rate indicators including topics such as stellar evolution and stellar spectra the stellar initial mass function and the physical conditions in the interstellar medium The authors bring together in one place detailed and comparative discussions of traditional and new star formation rate indicators star formation rate measurements in different spatial scales and comparisons of star formation rate indicators probing different stellar populations along with the corresponding theoretical background This is a useful reference for students and researchers working in the field of extragalactic astrophysics and studying star formation in local and higher redshift galaxies *The Properties of Star-Forming Galaxies at $Z \sim 2$* Dawn Erb, 2005 We study the properties of star forming galaxies at redshift $z \sim 2$ an era in which a substantial fraction of the stellar mass in the universe formed Using 114 near IR spectra of the H alpha and N II emission lines and model spectral energy distributions fit to rest frame UV through IR photometry we examine the galaxies star formation properties dynamical masses and velocity dispersions spatially resolved kinematics outflow properties and metallicities as a function of stellar mass and age While the stellar masses of the galaxies in our sample vary by a factor of 500 dynamical masses from H alpha velocity dispersions and indirect estimates of gas masses imply that the variation of stellar mass is due as much to the evolution of the stellar population and the conversion of gas into stars as to intrinsic differences in the total masses of the galaxies About 10% of the galaxies are apparently young starbursts with high gas fractions caught just as they have begun to convert large amounts of gas into stars Using the N II H alpha ratio of composite spectra to estimate the average oxygen abundance we find a monotonic increase in metallicity with stellar mass From the estimated gas fractions we conclude that the observed mass metallicity relation is primarily driven by the increase in metallicity as gas is converted to stars The picture that emerges is of galaxies with a broad range in stellar population properties from young galaxies with ages of a few tens of Myr stellar masses $M \sim 10^{10} \text{ DEGREES } 9 \text{ Msun}$ and metallicities $Z \sim 1/3 \text{ Zsun}$ to massive objects with $M \sim 10^{11} \text{ DEGREES } 11 \text{ Msun}$ $Z \sim \text{Zsun}$ and ages as old as the universe allows All however are rapidly star forming power galactic scale outflows and have masses in gas and stars of at least $10^{10} \text{ DEGREES } 10 \text{ Msun}$ in keeping with their likely role as the progenitors of elliptical galaxies From the Realm of the Nebulae to Populations of Galaxies Mauro D'Onofrio, Roberto Rampazzo, Simone Zaggia, 2016-07-26 In order to outline possible future directions in galaxy research this book wants to be a short stopover a moment of self reflection of the past century of achievements in this area Since the pioneering years of galaxy research in the

early 20th century the research on galaxies has seen a relentless advance directly connected to the parallel exponential growth of new technologies Through a series of interviews with distinguished astronomers the editors provide a snapshot of the achievements obtained in understanding galaxies While many initial questions about their nature have been addressed many are still open and require new efforts to achieve a solution The discussions may reveal paradigms worthwhile revisiting With the help of some of those scientists who have contributed to it the editors sketch the history of this scientific journey and ask them for inspirations for future directions of galaxy research

The Multiwavelength Atlas of Galaxies Glen Mackie, 2011-01-06 Since the radio signature of our own Milky Way was detected in 1931 galaxies have been observed from ultra high energy gamma rays to long wavelength radio waves providing fundamental insights into their formation evolution and structural components Unveiling the secrets of some of the best observed galaxies this atlas contains over 250 full color images spanning the whole electromagnetic spectrum The accompanying text explains why we see the component stars gas and dust through different radiation processes and describes the telescopes and instruments used This atlas is a valuable reference resource on galaxies for students seeking an overview of multiwavelength observations and what they tell us and researchers needing detailed summaries of individual galaxies An accompanying website hosted by the author contains slide shows of the galaxies covered in the book This is available at www.cambridge.org/9780521620628

Physics and Chemistry of Circumstellar Dust Shells Hans-Peter Gail, Erwin Sedlmayr, 2014 This book explores why dust forms around stars and how to model stellar dust formation and dust forming environments consistently

Astrophysics Update 2 John Mason, 2006-08-29 Astrophysics Updates is intended to serve the information needs of professional astronomers and postgraduate students about areas of astronomy astrophysics and cosmology that are rich and active research spheres Observational methods and the latest results of astronomical research are presented as well as their theoretical foundations and interrelations The contributed commissioned articles are written by leading exponents in a format that will appeal to professional astronomers and astrophysicists who are interested in topics outside their own specific areas of research This collection of timely reviews may also attract the interest of advanced amateur astronomers seeking scientifically rigorous coverage

Reports on Astronomy 2003-2005 (IAU XXVIA) Oddbjørn Engvold, 2007-05-10 Transactions XXVIA of the International Astronomical Union IAU provides a comprehensive and authoritative review of what has been achieved in astronomy during the years 2003 to 2005 The insightful and up to date reviews are written by the Presidents and Chairpersons of the IAU's different Divisions Commissions and Working Groups and each focuses on a different subject area Topics covered in this wide ranging volume include fundamental astronomy the Sun and heliosphere planetary systems sciences stars variable stars interstellar matter the Galactic system galaxies and the Universe optical and infrared techniques radio astronomy space and high energy astrophysics and other IAU activities The reviews are written at a level suitable for colleagues in the same field but they will also be useful for students and researchers wishing to gain an overview beyond

their own research area **Island Universes** R. S. de Jong, 2007-05-24 This book contains an up to date review of the structure and evolution of disk galaxies from both the observational and theoretical point of view It is the proceedings of the Island Universes conference held at the island of Terschelling in July 2005 It brings together a broad range of aspects of disk galaxies structure and dynamics the latest multi wavelength surveys low and high redshift observations theory and observations **From the Outer Heliosphere to the Local Bubble** J.L. Linsky, V.V. Izmodenov, E. Mobius, Rudolf von Steiger, 2009-04-29 Knowledge about the outer heliosphere and the interstellar medium which were long treated as two separate fields has improved dramatically over the past 25 years as a consequence of recent developments The discovery of interstellar pickup ions and neutral helium inside the heliosphere the determination of the interstellar hydrogen distribution in the heliosphere obtained using backscattered solar Lyman alpha radiation the prediction and subsequent detection of the hydrogen wall just outside of the heliopause the development of detailed global models for the interaction of solar wind plasma with the interstellar medium and most recently direct in situ plasma and field measurements inside of the heliosheath At the same time our understanding of the nearby galactic environment including the composition and dynamics of the warm gas clouds and hot gas in the local bubble has benefited greatly from absorption line spectroscopy using nearby stars as background sources and dynamic modeling The present volume provides a synopsis of these developments organised into seven sections Dominant physical processes in the termination shock and heliosheath three dimensional shape and structure of the dynamic heliosphere relation of the plasmas and dust inside and outside of the heliosphere origin and properties of the very local interstellar medium energy and pressure equilibria in the local bubble physical processes in the multiphase interstellar medium inside of the local bubble and the roles that magnetic fields play in the outer heliosphere and the local bubble The last theme is probably the most basic of all as magnetic fields play important roles in most of the phenomena discussed here The volume concludes with four papers providing the big picture by looking at the time evolution of both the heliosphere and the local bubble looking beyond the local bubble and finally addressing the challenges in modeling the interface between the two media
