Marfunin, 2012-12-06 The development of mineralogy the evolutionary changes in comprehending the mineral substance of the earth are closely associated with the progress of research methods Over a space of more than two and half centuries from the goniometry of the mineral crystals to microscopic petrography and optical mineralogy to crystal structure determinations electron microscopy and electron diffraction and finally investigations into their electrical magnetic and mechanical properties all this has led to the formation of the existing system of mineralogy its notions theories and to a proper description of minerals However no matter how great the variety of methods employed in mineralogy they all come to a few aspects of substance characteristics These are methods of determining the composition structure and proper ties of the minerals Thus the X ray micro analyzer the atom absorption neutron activation chromatographic and other analyses open up new opportunities for determining nothing else but the elementary composition of minerals *Modern Luminescence Spectroscopy of Minerals and Materials* Michael Gaft, Renata Reisfeld, Gerard Panczer, 2015-11-29 The book is devoted to three types of laser based spectroscopy of minerals namely Laser Induced Time Resolved Luminescence Laser Induced Breakdown spectroscopy and Gated Raman Spectroscopy This new edition presents the main new data which have been received after the publication of the first edition ten years ago both by the authors and by other researchers During this time only the authors published more than 50 original papers devoted to laser based spectroscopy of minerals A lot of new data have been accumulated both in fundamental and applied aspects which are presented in new edition [Spectroscopic Methods in Mineralogy](#) A.
