WHAT IS SPEECH & LANGUAGE?

"Speech" can be thought of as verbal communication. It is the act of mouth, throat and vocal cords working together to produce sounds that become syllables, words, & sentences. Speech: Many carries no meaning. It is merely different sounds.

- Fluency (fluency and rhythm)

"Language" encompasses how we use speech to communicate with others in order to communicate. Language also consists of three parts: expressive (the words a person uses to communicate), receptive (the words a person understands), and grammar (the rules of communication).

Speech-Language Pathologists (SLPs) can help! SLPs are all master's-level educated individuals working to help children & adults improve communication. SLPs provide a variety of coursework & clinical placements prior to treating clients.

SLPs are licensed both by the state in which they practice & the American Speech-Language-Hearing Association (ASHA) to work with individuals of varying needs & diagnoses in the areas of articulation, expressive and pragmatic language, articulation and phonology, fluency, voice, feeding and swallowing.

SLPs typically work in clinics, schools, hospitals, or nursing homes.

HOW TO ENCOURAGE SPEECH & LANGUAGE

Communicative temptations: create situations where a child needs to gesture, vocalize, or verbalize to have his or her needs met before giving desired object (e.g., puzzle pieces)

Imitations: Having a child imitate you helps him or her to produce words & sounds at appropriate times (e.g., saying "hi" to animal howl as you take them out of the box)

Expanding: using a child's language and expanding it to make it more complex (e.g., child says "ball," adult can say "that is your ball")

Build vocabulary: target and engage relevant new words (e.g., seasonal words) to help build vocabulary

Read aloud: emphasize & reinforce new words, ask questions about the story while reading, ask child to retell the story (if age appropriate)

Ask questions: posing questions about daily activities are a great way to encourage language skills, including naming & understanding functions.

Narrate everything: modeling your own speech and language can increase exposure to correct production & enhance a child's abilities.

Speech Origins And Development:

The Origins and Development of Emigrant Languages Hans Frede Nielsen, Lene Schøsler, 1996-01-01 The Origins and Development of Emigrant Languages is the proceedings from the Second Rasmus Rask Colloquium held at Odense University November 1994 *The Origin and Development of the Bengali Language* Suniti Kumar Chatterji, 1926 Speech Origins and Development Edmund Michael R. Critchley, 1967 **Homeric Speech and the Origins of Rhetoric** Rachel Ahern Knudsen, 2014-04 Knudsen argues that Homeric epics are the locus for the origins of rhetoric Traditionally Homer's epics have been the domain of scholars and students interested in ancient Greek poetry and Aristotle's rhetorical theory has been the domain of those interested in ancient rhetoric Rachel Ahern Knudsen believes that this academic distinction between poetry and rhetoric should be challenged Based on a close analysis of persuasive speeches in the Iliad Knudsen argues that Homeric poetry displays a systematic and technical concept of rhetoric and that many Iliadic speakers in fact employ the rhetorical techniques put forward by Aristotle Rhetoric in its earliest formulation in ancient Greece was conceived as the power to change a listener's actions or attitudes through words particularly through persuasive techniques and argumentation Rhetoric was thus a technical discipline in the ancient Greek world a craft techné that was rule governed learned and taught This technical understanding of rhetoric can be traced back to the works of Plato and Aristotle which provide the earliest formal explanations of rhetoric But do such explanations constitute the true origins of rhetoric as an identifiable systematic practice If not where does a technique driven rhetoric first appear in literary and social history Perhaps the answer is in Homeric epics Homeric Speech and the Origins of Rhetoric demonstrates a remarkable congruence between the rhetorical techniques used by Iliadic speakers and those collected in Aristotle's seminal treatise on rhetoric Knudsen's claim has implications for the fields of both Homeric poetry and the history of rhetoric In the former field it refines and extends previous scholarship on direct speech in Homer by identifying a new dimension within Homeric speech namely the consistent deployment of well defined rhetorical arguments and techniques In the latter field it challenges the traditional account of the development of rhetoric probing the boundaries that currently demarcate its origins history and relationship to poetry Civilizations development and species origin technologies Vadym Valeriyovych Korpachev, 2020-07-07 The origin of life on Earth is the basic view of the world's concept At present its origin and development are treated either from the scientific evolutionary theory points of view or religious mythological ones At the same time the evolutionary theory fails to provide grounded explanations to a lot of events which have happened and are observed in nature The data related to the complexity of life processes genetic programming and many biology and palaeontological facts cast doubt on the possibility of spontaneous occurrence of protein organisms during evolutionary transformations They indicate that the protein life development occurred in the direction of the planned improvement through the complex technology's implementation which requires specific scientific knowledge Therefore the necessity to formulate the new technological concept of the life

appearance on Earth which is provided by the given book has occurred. It summarizes numerous well known facts which are being interpreted as the result of the highly developed civilization technological developments. The stated views have more grounds for existence than the evolutionary theory and biblical ideas about the divine creation of the world. The fact that society treats all the ideas of the life creation as religious ones and that they are used by the theologians turns out to be the ideological problem. The book is aimed at overcoming the barrier of such non perception. The analysis performed allows the reader to understand in which cases random events occur and in which ones there is a logical purposeful intelligent activity the result of which is the development of self replicating protein organisms programmed to perform the work necessary to meet the needs of their creators on Earth. Reflections on the possible material nature of the highly developed mind carriers are given. According to the author a human being is not a passive observer of random evolutionary changes in nature but has his mission in the artificially developed system of energy supply of Earth along with other protein organisms. If the protein world including humans has been created for a specific purpose then mankind must not violate its implementation and should follow its mission. A new worldview should introduce changes in the main mankind's activity spheres: science, politics, religion and the human being's personal life. The book is designed for a wide range of readers of various specialties. Conceptually it is important for people who do not share the evolutionary theory provisions and existing religious beliefs. **G. H. Mead's**

History of Creation: Or the Development of the Earth and Its Inhabitants by the Action of Natural Causes Ernst Haeckel, 1876. **The Chautauquan**, 1885. *A History of Roget's Thesaurus: Origins, Development, and Design* Werner Hülsen, 2003-11-27. In 1852 Peter Mark Roget eclipsed a rich tradition of topically based dictionaries with the publication of his *Thesaurus of English Words and Phrases Classified and Arranged so as to Facilitate the Expression of Ideas Based on intuition as much as on specific linguistic principles*. Roget's book has been a bestseller ever since and is one of the most widely used reference works ever published. In this book Werner Hülsen gives the first history of its genesis and publication and investigates the principles of its structural design. The author opens with an account of Roget's life and his background in natural science. He then charts the parallel histories of dictionaries of synonyms and concepts within the general context of lexicography. Synonymy he argues is a necessary feature of languages without which communication would be impossible. He traces its theory and practice from Plato to the emergence of French and English synonym dictionaries in the seventeenth century. Roget's was the first such book to be arranged by topic and the first to encompass the semantic network of the entire language. The author examines the manner and method of its compilation, the practical outcomes of the traditions on which it was based and the ways in which the *Thesaurus* reflects and reveals Roget's beliefs and background. *A History of Roget's Thesaurus* will interest students and scholars of linguistics, semantics and lexicography as well as anyone wishing to know more about a great literary achievement and an astonishing publishing phenomenon.

From Ecology to Brain Development: Bridging Separate Evolutionary Paradigms Francisco Aboitiz, Miguel L.

Concha, Christian González-Billault, Jorge Mpodozis, 2018-09-14 The nervous system is the product of biological evolution and is shaped by the interplay between extrinsic factors determining the ecology of animals and by intrinsic processes that dictate the developmental rules that give rise to adult functional structures This special topic is oriented to develop an integrative view from behavior and ecology to neurodevelopmental processes We address questions such as how do sensory systems evolve according to ecological conditions How do neural networks organize to generate adaptive behavior How does cognition and brain connectivity evolve What are the developmental mechanisms that give rise to functional adaptation Accordingly the book is divided in three sections i Evolution of sensorimotor systems ii Cognitive computations and neural circuits and iii Development and brain evolution We hope that this initiative will support an interdisciplinary program that addresses the nervous system as a unified organ subject to both functional and developmental constraints where the final outcome results of a compromise between different parameters rather than being the result of several single variables acting independently of each other
