Types and Breeds of Farm Animals Charles Sumner Plumb, 1906 *Bulletin* Ontario. Dept. of Agriculture, 1902

The history of livestock started with the domestication of their wild ancestors a restricted number of species allowed to be tamed and entered a symbiotic relationship with humans In exchange for food shelter and protection they provided us with meat eggs hides wool and draught power thus contributing considerably to our economic and cultural development Depending on the species domestication took place in different areas and periods After domestication livestock spread over all inhabited regions of the earth accompanying human migrations and becoming also trade objects This required an adaptation to different climates and varying styles of husbandry and resulted in an enormous phenotypic diversity Approximately 200 years ago the situation started to change with the rise of the concept of breed Animals were selected for the same visible characteristics and crossing with different phenotypes was reduced This resulted in the formation of different breeds mostly genetically isolated from other populations A few decades ago selection pressure was increased again with intensive production focusing on a limited range of types and a subsequent loss of genetic diversity For short term economic reasons farmers have abandoned traditional breeds As a consequence during the 20th century at least 28% of farm animal breeds became extinct rare or endangered The situation is alarming in developing countries where native breeds adapted to local environments and diseases are being replaced by industrial breeds In the most marginal areas farm animals are considered to be essential for viable land use and in the developing world a major pathway out of poverty Historic documentation from the period before the breed formation is scarce Thus reconstruction of the history of livestock populations depends on archaeological archeo zoological and DNA analysis of extant populations Scientific research into genetic diversity takes advantage of the rapid advances in molecular genetics Studies of mitochondrial DNA microsatellite DNA profiling and Y chromosomes have revealed details on the process of domestication on the diversity retained by breeds and on relationships between breeds However we only see a small part of the genetic information and the advent of new technologies is most timely in order to answer many essential questions High throughput single nucleotide polymorphism genotyping is about to be available for all major farm animal species The recent development of sequencing techniques calls for new methods of data management and analysis and for new ideas for the extraction of information To make sense of this information in practical conditions integration of geo environmental and socio economic data are key elements The study and management of farm animal genomic resources FAnGR is indeed a major multidisciplinary issue The goal of the present Research Topic was to collect contributions of high scientific quality relevant to biodiversity management and applying new methods to either new genomic and bioinformatics approaches for characterization of FAnGR to the development of FAnGR

conservation methods applied ex situ and in situ to socio economic aspects of FAnGR conservation to transfer of lessons between wildlife and livestock biodiversity conservation and to the contribution of FAnGR to a transition in agriculture FAnGR and agro ecology Genetic Diversity and Selection Signatures in Composite Breeds Tiago do Prado Paim,Luiz Brito,El Hamidi Hay,Johann Sölkner,2022-09-28 How to Raise Pigs Philip Hasheider,2014-01-15 Backed by the National FFA Organization our acclaimed series of How to Raise guides has helped countless first time animal owners across the United States confidently care for their new companions In this freshly updated second edition of How to Raise Pigs farmer and author Philip Hasheider covers every facet of raising pigs His approachable authoritative advice covers everything from figuring out which breed to buy to properly housing fencing feeding breeding showing marketing and butchering your animals Fully illustrated with instructional photography How to Raise Pigs continues to serve as the go to reference book in your livestock library whether you re raising your pigs for pleasure or profit **Book of Abstracts for the 10th World Conference on Animal Production** Scientific Committee,2023-08-28 NO DESCRIPTION **Clinical Biochemistry of Domestic Animals** Jiro J.
