law *Vision and Values in Managing Education* Judith Bell, Bernard T. Harrison, 2018-05-11 Originally published in 1995 This book argues that in order to fulfil its task of moving schools and colleges forward to meet the demands of the future the management of education must be inspired by both value and vision applied to the actual management of people and resources Part 1 examines key critical issues that should guide principles of school and college management Part 2 identifies key aspects of the management and leadership of people including case studies of effective team leadership Part 3 deals with the management of all educational resources to achieve improvement and success in schools and colleges *International Teacher Education* Cheryl J. Craig, Lily Orland-Barak, 2014-12-02 The book fills a gaping hole in the teacher education literature Nowhere is there a volume that globally surveys teacher education pedagogies and invites international scholars to describe the most productive ones in their home countries **Global Management** Stewart R Clegg, Eduardo Ibarra-Colado, Bueno-Rodriguez Luis, 1999-02-22 This book re examines management theory after Globalization Combining key names and studies from across the world it explores the local realities that resist universal theories and that permeate the daily lives of practising managers The book provides a comprehensive and critical reflection on the widely documented phenomenon of globalization in business It assesses the implications of the diversity of individual economies and enterprises for general theories of management and concludes by presenting new approaches to the study and research of management and organizations **The Logic of Information** Luciano Floridi, 2019-01-21 Luciano Floridi presents an innovative approach to philosophy conceived as conceptual design He explores how we make transform refine and improve the objects of our knowledge His starting point is that reality provides the data to be understood as constraining affordances and we transform them into information like semantic engines Such transformation or repurposing is not equivalent to portraying or picturing or photographing or photocopying anything It is more like cooking the dish does not represent the ingredients it uses them to make something else out of them yet the reality of the dish and its properties hugely depend on the reality and the properties of the ingredients Models are not representations understood as pictures but interpretations understood as data elaborations of systems Thus he articulates and defends the thesis that knowledge is design and philosophy is the ultimate form of conceptual design Although entirely independent of Floridi's previous books *The Philosophy of Information* OUP 2011 and *The Ethics of Information* OUP 2013 *The Logic of Information* both complements the existing volumes and presents new work on the foundations of the philosophy of information **EBOOK: Learning Spaces: Creating Opportunities for Knowledge Creation in Academic Life** Maggi Savin-Baden, 2007-11-16 This is a timely and important book which seeks to reclaim universities as places of learning It is jargon free and forcefully argued It should be on every principal and vice chancellor's list of essential reading Jon Nixon Professor of Educational Studies University of Sheffield The ability to have or to find space in academic life seems to be increasingly difficult since we seem to be consumed by teaching and bidding overwhelmed by emails and underwhelmed by long arduous meetings This book explores the concept of learning

spaces the idea that there are diverse forms of spaces within the life and life world of the academic where opportunities to reflect and critique their own unique learning position occur Learning Spaces sets out to challenge the notion that academic thinking can take place in cramped busy working spaces and argues instead for a need to recognise and promote new opportunities for learning spaces to emerge in academic life The book examines the ideas that Learning spaces are increasingly absent in academic life The creation and re creation of learning spaces is vital for the survival of the academic community The absence of learning spaces is resulting in increasing dissolution and fragmentation of academic identities Learning spaces need to be valued and possibly redefined in order to regain and maintain the intellectual health of academe In offering possibilities for creative learning spaces this innovative book provides key reading for those interested in the future of universities including educational developers researchers managers and policy makers

Some New World Peter Harrison, 2024-04-18 In his famous argument against miracles David Hume gets to the heart of the modern problem of supernatural belief We are apt says Hume to imagine ourselves transported into some new world where the whole form of nature is disjointed and every element performs its operation in a different manner from what it does at present This encapsulates observes Peter Harrison the disjuncture between contemporary Western culture and medieval societies In the Middle Ages people saw the hand of God at work everywhere Indeed many suppose that belief in the supernatural is likewise fundamental nowadays to religious commitment But dichotomising between naturalism and supernaturalism is actually a relatively recent phenomenon just as the notion of belief emerged historically late In this masterful contribution to intellectual history the author overturns crucial misconceptions myths about secular modernity challenging common misunderstandings of the past even as he reinvigorates religious thinking in the present Fallibilist Solutions to Institutional Problems

John Wettersten, 2022-03-04 Since Karl Popper's fallibilist portrayal of scientific methodology in the 1940s critical rationalism has developed in many ways and in many fields However some of these developments still leave deep and important possibilities open One of these is the portrayal of all rational actions as social This book elucidates the significance of this perspective in regard to psychology political and social philosophy the understanding of how scientists can better communicate and strategies for better living The importance of the social theory of rationality for psychology arises above all due to the numerous assumptions made in psychological research that rationality is strictly individualist This is at hand for example in its historical portrayal and in important aspects of cognitive psychology As shown here these assumptions have damaging consequences for the relationship of rationality with cognitive and social psychology

Scepticism and the Foundation of Epistemology Luciano Floridi, 1996-07-01 Can knowledge provide its own justification This sceptical challenge known as the problem of the criterion is one of the major issues in the history of epistemology and this volume provides its first comprehensive study in a span of time that goes from Sextus Empiricus to Quine After an essential introduction to the notions of knowledge and of philosophy of knowledge the book provides a detailed reconstruction of the history of the problem There follows a conceptual analysis of its logical features and a comparative examination of a phenomenology of solutions that have been suggested in the course of the history of philosophy in order to overcome it from Descartes to Popper In this context an indirect approach to the problem of the criterion is defended as the most successful strategy against the sceptical challenge
