edited volume is the first such book ever published on fuzzy cognitive maps FCMs Professor Michael Glykas has done an exceptional job in bringing together and editing its seventeen chapters The volume appears nearly a quarter century after my original article Fuzzy Cognitive Maps appeared in the International Journal of Man Machine Studies in 1986 The volume accordingly reflects many years of research effort in the development of FCM theory and applications and portends many more decades of FCM research and applications to come FCMs are fuzzy feedback models of causality They combine aspects of fuzzy logic neural networks semantic networks expert systems and nonlinear dynamical systems That rich structure endows FCMs with their own complexity and lets them apply to a wide range of problems in engineering and in the soft and hard sciences Their partial edge connections allow a user to directly represent causality as a matter of degree and to learn new edge strengths from training data Their directed graph structure allows forward or what if inferencing FCM cycles or feedback paths allow for complex nonlinear dynamics Control of FCM nonlinear dynamics can in many cases let the user encode and decode concept patterns as fixed point attractors or limit cycles or perhaps as more exotic dynamical equilibria These global equilibrium patterns are often hidden in the nonlinear dynamics The user will not likely see these global patterns by simply inspecting the local causal edges or nodes of large FCMs *Knowledge-Based Intelligent Information and Engineering Systems* Bruno Apolloni,2007-09-12 Annotation The three volume set LNAI 4692 LNAI 4693 and LNAI 4694 constitute the refereed proceedings of the 11th International Conference on Knowledge Based Intelligent Information and Engineering Systems KES 2007 held in Vietri sul Mare Italy September 12 14 2007 The 409 revised papers presented were carefully reviewed and selected from about 1203 submissions The papers present a wealth of original research results from the field of intelligent information processing in the broadest sense topics covered in the first volume are artificial neural networks and connectionists systems fuzzy and neuro fuzzy systems evolutionary computation machine learning and classical AI agent systems knowledge based and expert systems hybrid intelligent systems miscellaneous intelligent algorithms intelligent vision and image processing knowledge management and ontologies Web intelligence multimedia e learning and teaching intelligent signal processing control and robotics other intelligent systems applications papers of the experience management and engineering workshop industrial applications of intelligent systems as well as information engineering and applications in ubiquotous computing environments **Knowledge-Based Intelligent Information and Engineering Systems** Rajiv Khosla,2005-08-25 Dear delegates friendsand membersofthe growingKES professionalcommunity w come to the proceedings of the 9th International Conference on Knowledge Based and IntelligentInformationandEngineeringSystemshostedbyLa TrobeUniversityin M bourne Australia The KES conference series has been established for almost a decade and it cont ues each year to attract participants from all geographical areas of the world including Europe the Americas Australasia and the Paci c Rim The KES conferences cover a wide range of intelligent systems topics The broad focus of the conference series is the theory and applications of intelligent systems From a pure
