**The Complete Guide to the NEXTSTEPTM User Environment** Michael B. Shebanek,1993-09-17 This book is about the advanced object oriented NEXTSTEpTM user envi ronment for NeXT and Intel based computers It is intended for those who already own a computer running NEXTSTEP and want to quickly learn what it can do and how to get the most out of it with the least effort It s also for those who are considering the purchase of NEXTSTEP but want to learn more about how it works before making an investment Why a book on NEXTSTEP When I set out to learn how to use NEXT STEP several years ago I found it extremely difficult to find information from the usual sources such as books magazines user groups and autho rized dealers NEXTSTEP users were scarce and finding a computer store that sold NeXT related products was even more rare There were also only a handful of NeXT user groups in existence and those that did exist met so far away that joining one of them was impractical The manuals I received from NeXT were helpful but I had the feeling there must be something more to it than what was written in the User s Reference It didn t describe many of the shortcuts that experienced users had found or the public domain and shareware utilities that were popular and how I could use them to make my work even easier and more fun      **Soft Computing and Fractal Theory for Intelligent Manufacturing** Oscar Castillo,Patricia Melin,2012-08-11 We describe in this book new methods for intelligent manufacturing using soft computing techniques and fractal theory Soft Computing SC consists of several computing paradigms including fuzzy logic neural networks and genetic algorithms which can be used to produce powerful hybrid intelligent systems Fractal theory provides us with the mathematical tools to understand the geometrical complexity of natural objects and can be used for identification and modeling purposes Combining SC techniques with fractal theory we can take advantage of the intelligence provided by the computer methods and also take advantage of the descriptive power of the fractal mathematical tools Industrial manufacturing systems can be considered as non linear dynamical systems and as a consequence can have highly complex dynamic behaviors For this reason the need for computational intelligence in these manufacturing systems has now been well

recognized We consider in this book the concept of intelligent manufacturing as the application of soft computing techniques and fractal theory for achieving the goals of manufacturing which are production planning and control monitoring and diagnosis of faults and automated quality control As a prelude we provide a brief overview of the existing methodologies in Soft Computing We then describe our own approach in dealing with the problems in achieving intelligent manufacturing Our particular point of view is that to really achieve intelligent manufacturing in real world applications we need to use SC techniques and fractal theory **New Learning Paradigms in Soft Computing** Lakhmi C. Jain,Janusz Kacprzyk,2013-06-05 Learning is a key issue in the analysis and design of all kinds of intelligent systems In recent time many new paradigms of automated machine learning have been proposed in the literature Soft computing that has proved to be an effective and efficient tool in so many areas of science and technology seems to offer new qualities in the realm of machine learning too The purpose of this volume is to present some new learning paradigms that have been triggered or at least strongly influenced by soft computing tools and techniques mainly related to neural networks fuzzy logic rough sets and evolutionary computations Application of Soft Computing Techniques in Mechanical Engineering Amar Patnaik,Vikas Kukshal,Pankaj Agarwal,Ankush Sharma,Mahavir Choudhary,2022-12-14 This text covers the latest intelligent technologies and algorithms related to the state of the art methodologies of monitoring and mitigation of mechanical engineering It covers important topics including computational fluid dynamics for advanced thermal systems optimizing performance parameters by Fuzzy logic design of experiments numerical simulation and optimizing flow network by artificial intelligence It will serve as an ideal reference text for graduate students and academic researchers in diverse engineering fields including industrial manufacturing computer mechanical and materials science The book Introduces novel soft computing techniques needed to address sustainable solutions for the issues related to materials and manufacturing process Provides perspectives for the design development and commissioning of intelligent applications Discusses the latest intelligent technologies and algorithms related to the state of the art methodologies of monitoring and mitigation of sustainable engineering Explores future generation sustainable and intelligent monitoring techniques beneficial for mechanical engineering Covers implementation of soft computing in the various areas of engineering applications This book introduces soft computing techniques in addressing sustainable solutions for the issues related to materials and manufacturing process It will serve as an ideal reference text for graduate students and academic researchers in diverse engineering fields including industrial manufacturing thermal fluid and materials science *Artificial Intelligence and Soft Computing* Leszek Rutkowski,Marcin Korytkowski,Rafał Scherer,Ryszard Tadeusiewicz,Lotfi A.
