Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering doubled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference **Software**

Engineering Education A.I. Wasserman,P. Freeman,2012-12-06 Software engineering is a term which was coined in the late 1960 s as the theme for a workshop on the problems involved in producing software that could be developed economically and would run reliably on real machines Even now software engineering is more of a wish than a reality but the last few years have seen an increased awareness of the need to apply an engineering type discipline to the design and construction of software systems Many new proposals have been made for the management of software development and maintenance and many methodologies have been suggested for improving the programming process As these problems and solutions become better understood there is a growing need to teach these concepts to students and to practicing professionals As a prelude to the educational process it is necessary to gain an understanding of the software design and development process in industry and government to define the appropriate job categories and to identify the fundamental content areas of software engineering The need for quality education in software engineering is now recognized by practitioners and educators alike and various educational endeavors in this area are now being formulated Yet discussions we had had over the past year or so led us to believe that there was insufficient contact between practitioners and educators with the resultant danger that each group would go off in separate ways rather than working together *Computational*
