Burk, Mark A. Lemley, 2009-08-01 Patent law is crucial to encourage technological innovation But as the patent system currently stands

diverse industries from pharmaceuticals to software to semiconductors are all governed by the same rules even though they innovate very differently The result is a crisis in the patent system where patents calibrated to the needs of prescription drugs wreak havoc on information technologies and vice versa According to Dan L Burk and Mark A Lemley in *The Patent Crisis and How the Courts Can Solve It* courts should use the tools the patent system already gives them to treat patents in different industries differently Industry tailoring is the only way to provide an appropriate level of incentive for each industry Burk and Lemley illustrate the barriers to innovation created by the catch all standards in the current system Legal tools already present in the patent statute they contend offer a solution courts can tailor patent law through interpretations and applications to suit the needs of various types of businesses *The Patent Crisis and How the Courts Can Solve It* will be essential reading for those seeking to understand the nexus of economics business and law in the twenty first century

A Socio-Legal Theory of Money for the Digital Commercial Society Israel Cedillo Lazcano, 2024-02-22 This book poses the question do we need a new body of regulations and the constitution of new regulatory agents to face the evolution of money in the Fourth Industrial Revolution After the Global Financial Crisis and the subsequent introduction of Distributed Ledger Technologies in monetary matters multiple opinions claim that we are in the middle of a financial revolution that will eliminate the need for central banks and other financial institutions to form bonds of trust on our behalf In contrast to these arguments this book argues that we are not witnessing a revolutionary expression but an evolutionary one that we can trace back to the very origin of money

Accordingly the book provides academics regulators and policy makers with a multidisciplinary analysis that includes elements such as the relevance of intellectual property rights which are disregarded in the legal analysis of money Furthermore the book proposes the idea that traditional analyses on the exercise of the *lex monetae* ignore the role of inside monies and technological infrastructures developed and supported by the private sector as exemplified in the evolution of the cryptoassets market and in cases such as *Banco de Portugal v Waterlow Sons* The book puts forward a proposal for the design and regulation of new payment systems and invites the reader to look beyond the dissemination of individual Distributed Ledger Technologies such as Bitcoin
