Soil Mineral Stresses Approaches To Crop Improvement Monographs On Theoretical And Applied Genetics 21:

Soil Mineral Stresses Anthony R. Yeo, Timothy J. Flowers, 2012-12-06 This book is concerned with the ways in which crops might be developed or improved for soils that are agriculturally unproductive because of excesses high salinity and metal toxicity and or deficiencies of certain minerals The aim is that those working to derive crops for growth on these problem soils should be aware of the many diverse avenues that are available The methods discussed are conventional breeding selection based on knowledge of the physiological basis of tolerance the use of cell culture and cytogenetics and the exploitation of native flora *Plant Tolerance to Abiotic Stresses in Agriculture: Role of Genetic Engineering* Joe H. Cherry, Robert D. Locy, Anna Rychter, 2000-09-30 Environmental stresses represent the most limiting factors for agricultural productivity worldwide These stresses impact not only current crop species they are also significant barriers to the introduction of crop plants into areas that are not currently being used for agriculture Stresses associated with temperature salinity and drought singly or in combination are likely to enhance the severity of problems to which plants will be exposed in the coming decades The present book brings together contributions from many laboratories around the world to discuss and compare our current knowledge of the role stress genes play in plant stress tolerance In addition strategies are discussed to introduce these genes and the processes that they encode into economically important crops and the effect this will have on plant productivity *Plant Abiotic Stress* Matthew A. Jenks, Paul M. Hasegawa, 2008-04-15 Over the past decade our understanding of plant adaptation to environmental stress has grown considerably This book focuses on stress caused by the inanimate components of the environment associated with climatic edaphic and physiographic factors that substantially limit plant growth and survival Categorically these are abiotic stresses which include drought salinity non optimal temperatures and poor soil nutrition Another stress herbicides is covered in this book to highlight how plants are impacted by abiotic stress originating from anthropogenic sources The book also addresses the high degree to which plant responses to quite diverse forms of environmental stress are interconnected describing the ways in which the plant utilizes and integrates many common signals and subsequent pathways to cope with less favorable conditions The book is directed at researchers and professionals in plant physiology cell biology and molecular biology in both the academic and industrial sectors **Plant Breeding Abstracts** ,1995 Cereal Research Communications ,2000 **Plant Biotechnology and Agriculture** Arie Altman, Paul Michael Hasegawa, 2012 As the oldest and largest human intervention in nature the science of agriculture is one of the most intensely studied practices From manipulation of plant gene structure to the use of plants for bioenergy biotechnology interventions in plant and agricultural science have been rapidly developing over the past ten years with immense forward leaps on an annual basis This book begins by laying the foundations for plant biotechnology by outlining the biological aspects including gene structure and expression and the basic procedures in plant biotechnology of genomics metabolomics transcriptomics and proteomics It then focuses on a discussion of the impacts of biotechnology on plant

breeding technologies and germplasm sustainability The role of biotechnology in the improvement of agricultural traits production of industrial products and pharmaceuticals as well as biomaterials and biomass provide a historical perspective and a look to the future Sections addressing intellectual property rights and sociological and food safety issues round out the holistic discussion of this important topic Includes specific emphasis on the inter relationships between basic plant biotechnologies and applied agricultural applications and the way they contribute to each other Provides an updated review of the major plant biotechnology procedures and techniques their impact on novel agricultural development and crop plant improvement Takes a broad view of the topic with discussions of practices in many countries **Écoscience** ,1997

improvement towards environmental issues Wheat is a major staple food crop that has largely been focused for fulfilling the food requirements of world population during the Green revolution Since then it has come to cover more agricultural land than any other commercial crop Continuously changing climatic conditions have drastically affected wheat production with yields largely limited by environmental constraints These production losses caused by crop vulnerability to climate change may be resolved by using wheat wild relatives that are closely related to cultivated genotypes and known for their beneficial traits Covers a variety of wheat genetic resources including wheat wild relatives WWR and neglected wheat species Describes advances in agronomic biochemical physiological and molecular approaches to counter the effect of individual environmental issues of drought heat salt cold nutrients and heavy metals constraints Explores the benefits of contemporary biotechnological tools including whole genome sequencing and genome editing
