Shukla, 2004-05-28 *Principles of Soil Physics* examines the impact of the physical mechanical and hydrological properties and processes of soil on agricultural production the environment and sustainable use of natural resources The text incorporates valuable assessment methods graphs problem sets and tables from recent studies performed around the globe and offers an abundance of tables photographs and easy to follow equations in every chapter The book discusses the consequences of soil degradation such as erosion inhibited root development and poor aeration It begins by defining soil physics soil mechanics textural properties and packing arrangements The text continues to discuss the theoretical and practical aspects of soil structure and explain the significance and measurement of bulk density porosity and compaction The authors proceed to clarify soil hydrology topics including hydrologic cycle water movement infiltration modeling soil evaporation and solute transport processes They address the impact of soil temperature on crop growth soil aeration and the processes that lead to the emission of greenhouse gases The final chapters examine the physical properties of gravelly soils and water movement in frozen saline and water repellant soils Reader friendly and up to date *Principles of Soil Physics* provides unparalleled coverage of issues related to soil physics structure hydrology aeration temperature and analysis and presents practical techniques for maintaining soil quality to ultimately preserve its sustainability *Organic Agriculture and Climate Change* Klaus Lorenz, Rattan Lal, 2022-11-02 This book will collate review and synthesize information on how Organic Agriculture OA practices affect and are affected by climate change in comparison to the more widely used conventional agricultural practices Pros and cons of OA practices will be discussed separately for croplands pasture lands mixed livestock cropping systems vegetable fields fruit and tree orchards and vineyards The book concludes with an overview on how conventional and OA practices can be prudently and discriminately combined to identify and adopt climate resilient agro ecosystems under site
