Advances in Soil Organic Matter Research W S Wilson,1991-01-01 The papers in this volume provide a balanced account of developments in soil organic matter research It focuses on composition and structure water quality organic matter turnover humus quality and fertility and is essential reading for all those concerned with the environmental aspects of soil conservation and improvement Soil Organic Matter in Temperate AgroecosystemsLong Term Experiments in North

America Eldor A. Paul,Keith H. Paustian,E. T. Elliott,C. Vernon Cole,2019-08-16 The presence or absence of soil organic matter SOM has important implications for agricultural productivity It could also have significant implications for global climate due to its role as a source sink of carbon Therefore it is important to understand the issues related to the accumulation or loss of SOM to use what we have learned from experiments to make sound decisions about soil and crop management and to test models and future concepts concerning SOM management A database is included with the book presenting tabular data for 34 sites in North America Soil Organic Matter in Temperate Agroecosystems discusses all of these issues and more answering such questions as **Soil Organic Matter and Feeding the Future** Rattan

Lal,2021-12-08 Soil organic matter SOM is the primary determinant of soil functionality Soil organic carbon SOC accounts for 50% of the SOM content accompanied by nitrogen phosphorus and a range of macro and micro elements As a dynamic component SOM is a source of numerous ecosystem services critical to human well being and nature conservancy Important among these goods and services generated by SOM include moderation of climate as a source or sink of atmospheric CO₂ and other greenhouse gases storage and purification of water a source of energy and habitat for biota macro meso and micro organisms a medium for plant growth cycling of elements N P S etc and generation of net primary productivity NPP The quality and quantity of NPP has direct impacts on the food and nutritional security of the growing and increasingly affluent human population Soils of agroecosystems are depleted of their SOC reserves in comparison with those of natural ecosystems The magnitude of depletion depends on land use and the type and severity of degradation Soils prone to accelerated erosion can be strongly depleted of their SOC reserves especially those in the surface layer Therefore conservation through restorative land use and adoption of recommended management practices to create a positive soil

ecosystem carbon budget can increase carbon stock and soil health This volume of *Advances in Soil Sciences* aims to accomplish the following Present impacts of land use and soil management on SOC dynamics Discuss effects of SOC levels on agronomic productivity and use efficiency of inputs Detail potential of soil management on the rate and cumulative amount of carbon sequestration in relation to land use and soil crop management Deliberate the cause effect relationship between SOC content and provisioning of some ecosystem services Relate soil organic carbon stock to soil properties and processes Establish the relationship between soil organic carbon stock with land and climate Identify controls of making soil organic carbon stock as a source or sink of CO₂ Connect soil organic carbon and carbon sequestration for climate mitigation and adaptation
