Taxonomy and Plant Conservation Etelka Leadlay, Stephen L. Jury, 2006-01-19 This book illustrates the key role played by taxonomy in the conservation and sustainable utilisation of plant biodiversity It is a tribute to the work of Professor Vernon Heywood who has done so much to highlight the importance of sound scholarship training and collaboration for plant conservation Divided into four parts the book opens with an overview of the place of taxonomy in science and in implementing the Convention on Biological Diversity Part 2 outlines the theoretical basis of taxonomy how it is done and how it contributes to measuring diversity The third part explains how taxonomy is used to establish conservation priorities and actions and the concluding part illustrates taxonomy in the practice and measurement of effective conservation action With contributions from taxonomists and also the users of taxonomy the volume will provide a balanced treatment suitable for advanced students researchers and conservation professionals

Molecular Systematics of Plants II Pamela Soltis, J.J. Doyle, 2012-12-06 In the five years since the publication of *Molecular Systematics of Plants* the field of molecular systematics has advanced at an astonishing pace This period has been marked by a volume of new empirical data and advances in theoretical and analytical issues related to DNA Comparative DNA sequencing facilitated by the amplification of DNA via the polymerase chain reaction PCR has become the tool of choice for molecular systematics As a result large portions of the *Molecular Systematics of Plants* have become outdated *Molecular Systematics of Plants II* summarizes these recent achievements in plant molecular systematics Like its predecessor this completely revised work illustrates the potential of DNA markers for addressing a wide variety of phylogenetic and evolutionary questions The volume provides guidance in choosing appropriate techniques as well as appropriate genes for sequencing for given levels of systematic inquiry More than a review of techniques and previous work *Molecular Systematics of Plants II* provides a stimulus for developing future research in this rapidly evolving field *Molecular Systematics of Plants II* is not only written for systematists faculty graduate students and researchers but also for evolutionary biologists botanists and paleobotanists interested in reviewing current theory and practice in plant molecular systematics

priorities are addressed through evaluations of protected natural areas and the safeguarding of native germplasm resources. Additionally, the contributors document the medicinal and biologically active products derived from arid zone flora, highlighting their ecological and cultural significance. Each chapter integrates case studies and findings from Mexico's key arid regions: the Baja California Peninsula, Chihuahuan Desert, Sonoran Desert, and Tehuac n Cuicat n Valley. Key Features: Comprehensive ecological, biological, and conservation analysis of Mexico's arid and semi-arid regions. In-depth focus on emblematic fauna and flora. Reproductive Biology and Taxonomy of Vascular Plants J. G. Hawkes, 2013-09-17. Reproductive Biology and Taxonomy of Vascular Plants is a collection of papers presented at the Conference on Reproductive Biology and Taxonomy of Vascular Plants held at the Department of Botany, University of Birmingham on April 23-25, 1965. The conference primarily explores the reproductive biology of flowering plants and ferns to arrive at a better understanding of variation patterns and modes of evolution. This book is divided into six chapters and begins with a discussion on the breeding systems, variation, and adaptation. The next chapters survey the practical implications of knowledge of breeding systems and other aspects of the reproductive biology of flowering plants, as well as the pollination mechanisms in orchids and the evolution of this family in relation to insect evolution. These chapters include an account of the foraging behavior of honey bees and its importance to the botanist in delineating the behavior of the insects that pollinate the plants. Other chapters deal with the mechanisms of plant dispersal and establishment, the aspects of seed dormancy and germination, and reproductive capacity related to evolutionary processes. The concluding chapters explore the many aspects of apomixis in its wider sense and survey how the variation patterns of apomicts were due to this special mode of reproduction. This book is directed primarily to botanists.
