Solar Energy Conversion The Solar Cell:

Solar Energy Conversion R.C. Neville, 1995-01-30 A large number of solar cell and solar cell systems are described in this volume The theory of their operation their design and the levels of their performance is discussed Originally the book appeared in 1978 but extensive change over the intervening years in the fields of energy generation and consumption solar energy and solar cells has necessitated the publication of an updated version The text initially surveys the requirements of humanity the subsequent need for solar cells the nature of sunlight and the properties of semiconductors Concrete examples extensive references and theoretical arguments are then used to present a comparison of options available in the design and operation of solar cells and solar cell systems The cells constructed from single crystal polycrystalline and amorphous semiconductors and the systems have varying designs and differing levels of solar energy for input and produce electricity or electrical and thermal energies Solar cell production economics and environmental effects are considered throughout the publication

Solar energy conversion Richard C. Neville, 1980 *Solar to Chemical Energy Conversion* Masakazu Sugiyama, Katsushi Fujii, Shinichiro Nakamura, 2016-01-25 This book explains the conversion of solar energy to chemical energy and its storage It covers the basic background interface modeling at the reacting surface energy conversion with chemical electrochemical and photoelectrochemical approaches and energy conversion using applied photosynthesis The important concepts for converting solar to chemical energy are based on an understanding of the reactions equilibrium and non equilibrium conditions Since the energy conversion is essentially the transfer of free energy the process are explained in the context of thermodynamics
