Solar And Interplanetary Dynamics:

Solar and Interplanetary Dynamics M. Dryer, Einar Tandberg-Hanssen, 2012-12-06 Informal discussions in 1977 among a number of scientists associated with solar and interplanetary physics revealed a need for a dialogue between the two often divergent groups. It was clear that the latter group was dependent essentially on the sun for its raison d'être. On the other hand it was also clear that the former group could benefit in its search for insight vis à vis solar activity by looking beyond the shell of the inner corona. Needless to add that the combined solar interplanetary topic is relevant to astrophysics when one considers stellar winds and binary star flows. It was felt therefore that a symposium was essential to bring together for the first time leading solar and interplanetary physicists from the international community to discuss and record herein their own research. The fundamental physical processes underlying our own capricious star's activity can be understood only by the coupling of solar and interplanetary topics in an intimate observational and theoretical structure. This book intended for active research scientists and advanced graduate students is an important step in this direction. The background of solar and interplanetary dynamics is provided in Part I The Life History of Coronal Structures and Fields and Part II Coronal and Interplanetary Responses to Long Time Scale Phenomena.

NASA Reference Publication, 1977 Radiation Belt Dynamics: Theory, Observation and Modeling Qianli Ma, Xinliang Gao, Dedong Wang, 2024-12-12 The radiation belts of the Earth and other magnetized planets are populated by relativistic particles which are highly dynamic due to various source and loss processes. Although the Earth's intrinsic magnetic fields trap charged particles, the satellite observations revealed that the outer radiation belt fluxes are strongly affected by solar wind and geomagnetic activities. The direct drivers of the radiation belt variability are radial diffusion due to ultra low frequency waves and local wave particle interactions due to whistler mode waves, electron cyclotron waves and ion cyclotron waves. Quasilinear and nonlinear theories were developed to demonstrate and quantify the importance of each process in the radiation belt dynamics. Numerical simulations generally reproduce the overall source and loss of radiation belt particles but detailed quantification of the observed features is challenging. Machine learning technique is proved as a useful tool in reproducing and forecasting the particle fluxes in radiation belts.

Foundations of Space Biology and Medicine: Space as a habitat, 1975 Space Weather Fundamentals George V. Khazanov, 2016-11-17 Space weather is one of the most significant natural hazards to human life and health. Conditions of the sun and in the solar wind, magnetosphere, ionosphere and thermosphere can influence the performance and reliability of space-borne and ground-based technological systems. If conditions in the space environment are adverse, they can cause disruption of satellite operations, communications, navigation

and electric power distribution grids leading to a variety of socioeconomic losses This book provides an overview of our current knowledge and theoretical understanding of space weather formation and covers all major topics of this phenomena from the sun to the Earth's ionosphere and thermosphere thus providing a fully updated review of this rapidly advancing field The book brings together an outstanding team of internationally recognised contributors to cover topics such as solar wind the earth's magnetic field radiation belts the aurora spacecraft charging orbital drag and GPS

NASA Technical Memorandum, 1963 Physics of the Inner Heliosphere II Rainer Schwenn, Eckart Marsch, 2013-06-29 Physics of the Inner Heliosphere gives for the first time a comprehensive and complete summary of our knowledge of the inner solar system Using data collected over more than 11 years by the HELIOS twin solar probes one of the most successful ventures in unmanned space exploration the authors have compiled six extensive reviews of the physical processes of the inner heliosphere and their relation to the solar atmosphere Researchers and advanced students in space and plasma physics astronomy and solar physics will be surprised to see just how closely the heliosphere is tied to and how sensitively it depends on the sun Volume 2 deals with particles waves and turbulence with chapters on magnetic clouds interplanetary clouds the solar wind plasma and MHD turbulence waves and instabilities energetic particles in the inner solar system Collisionless Shocks in the Heliosphere Robert G. Stone, Bruce T. Tsurutani, 1985 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 35 Violent expansions of the solar corona cause transient shock waves which propagate outward from the sun at hundreds to thousands of kilometers per second simple solar wind velocity gradients at the surface of the sun lead to high speed streams overtaking slower streams forming corotating shocks and steady state supermagnetosonic solar wind flow past objects such as the planets lead to standing bow shocks However the solar wind plasma is so hot and tenuous that charged particle Coulomb collisions produce negligible thermalization or dissipation on scale sizes less than 0.1 AU The irreversible plasma heating by these shocks is accomplished by wave particle interactions driven by plasma instabilities Hence these shocks are described as collisionless

The Century of Space Science J.A. Bleeker, Johannes Geiss, M. Huber, 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar Lüst and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work
