Hämmerli,2010-05-10 This volume contains the post proceedings of the Second International Workshop on Critical Information Infrastructure Security CRITIS 2007 that was held during October 3 5 2007 in Benalmadena Costa Malaga Spain and was hosted by the University of Malaga Computer Science Department In response to the 2007 call for papers 75 papers were submitted Each paper was reviewed by three members of the Program Committee on the basis of significance novelty technical quality and critical infrastructures relevance of the work reported therein At the end of the reviewing process only

29 papers were selected for presentation. Revisions were not checked and the authors bear full responsibility for the content of their papers. CRITIS 2007 was very fortunate to have four exceptional invited speakers: Adrian Gheorghe, Old Dominion University, USA; Paulo Verissimo, Universidade de Lisboa, Portugal; Donald Dudenhofer, Idaho National Labs, USA; and Jacques Bus, European Commission INFSO Unit Security. The four provided a high added value to the quality of the conference with very significant talks on different and interesting aspects of Critical Information Infrastructures. In 2007, CRITIS demonstrated its outstanding quality in this research area by including ITCIP, which definitively reinforced the workshop. Additionally, the solid involvement of the IEEE community on CIP was a key factor for the success of the event. Moreover, CRITIS received sponsorship from Telecom Italia, JRC of the European Commission, IIRIIS, IFIP, and IABG, to whom we are greatly indebted.

In this comprehensive guide, author and Java expert Scott Oaks takes the approach that anyone who works with Java should be equally adept at understanding how code behaves in the JVM as well as the tunings likely to help its performance. You'll gain in-depth knowledge of Java application performance using the Java Virtual Machine (JVM) and the Java platform, including the language and API. Developers and performance engineers alike will learn a variety of features, tools, and processes for improving the way Java 7 and 8 applications perform. Apply four principles for obtaining the best results from performance testing: Use JDK tools to collect data on how a Java application is performing; Understand the advantages and disadvantages of using a JIT compiler; Tune JVM garbage collectors to affect programs as little as possible; Use techniques to manage heap memory and JVM native memory. Maximize Java threading and synchronization performance features. Tackle performance issues in Java EE and Java SE APIs. Improve Java-driven database application performance.
