Solid State Lasers VI., 1997 **Solid State Lasers VI** Richard Scheps, 1997 **Solid State Lasers** Massimo Inguscio, Richard Wallenstein, 2012-12-06 This volume contains the lectures and seminars presented at the NATO Advanced Study Institute on Solid State Lasers New Developments and Applications the fifteenth course of the Europhysics School of Quantum Electronics held under the supervision of the Quantum Electronics Division of the European Physical Society The Institute was held at Elba International Physics Center Marciana Marina Elba Island Tuscany Italy August 31 September 11 1992 The Europhysics School of Quantum Electronics was started in 1970 with the aim of providing instruction for young researchers and advanced students already engaged in the area of quantum electronics or wishing to switch to this area from a different background Presently the school is under the direction of Professors F T Arecchi and M Inguscio University of Florence and Prof H Walther University of Munich and has its headquarters at the National Institute of Optics INO Florence Italy Each time the directors choose a subject of particular interest alternating fundamental topics with technological ones and ask colleagues specifically competent in a given area to take the scientific responsibility for that course

Solid-state Lasers Thomas O. Hardwell, 2008 A solid state laser uses a gain medium that is a solid rather than a liquid such as dye lasers or a gas such as gas lasers Semiconductor based lasers are also in the solid state but are generally considered separately from solid state lasers Generally the active medium of a solid state laser consists of a glass or crystalline host material to which is added a dopant such as neodymium chromium erbium or other ions Many of the common dopants are rare earth elements because the excited states of such ions are not strongly coupled with thermal vibrations of the crystalline lattice phonons and the lasing threshold can be reached at relatively low brightness of pump There are many hundreds of solid state media in which laser action has been achieved but relatively few types are in widespread use Of these probably the most common type is neodymium doped YAG Neodymium doped glass Nd glass and Ytterbium doped glasses and ceramics are used in solid state lasers at extremely high power terawatt scale high energy megajoules multiple beam systems for inertial confinement fusion Titanium doped sapphire is also widely used for its broad tunability This book gathers new research in the field

Spectroscopy of Solid-State Laser-Type Materials Baldassare Di Bartolo, Guzin Armagan, 2012-12-06 This book presents an account of the course Spectroscopy of Solid State Laser Type Materials held in Erice Italy from June 16 to 30 1985 This meeting was organized by the International School of Atomic and Molecular Spectroscopy of the Ettore Majorana Centre for Scientific Culture The objective of the course was to present and examine the recent advances in spectroscopy and theoretical modelling relevant to the interpretation of luminescence and laser phenomena in several classes of solid state materials The available solid state matrices e.g. halides oxides glasses semiconductors and the full range of possible activators transition ions rare earth ions post transition ions actinides color centres were considered By bringing together specialists in the fields of solid state luminescence and of solid state laser

materials this course provided a much needed forum for the critical assessment of past developments in the R to alert researchers in solid state luminescence to current technological needs for solid state tunable lasers operating in the visible and infrared spectral regions and generally to provide the scientific background for advanced work in solid state lasers A total of 71 participants came from 54 laboratories and 21 nations Austria Belgium Canada F R of Germany France Greece Ireland Israel Italy the Netherlands P R of China Poland Rumania Sweden Switzerland South Korea Spain Turkey United Kingdom U S A and U S S R

The invention of the laser was one of the towering achievements of the twentieth century At the opening of the twenty first century we are witnessing the burgeoning of the myriad technical innovations to which that invention has led The Handbook of Laser Technology and Applications is a practical and long lasting reference source for scientists a **Laser Theory**

Hermann Haken, 2012-12-06 This book written by one of the pioneers of laser theory is now considered a classic by many laser physicists Originally published in the prestigious Encyclopedia of Physics series it is now being republished in paperback to make it available not only to professors and scientists but also to students It presents a thorough treatment of the theory of laser resonators the quantum theory of coherence and the quantization of electromagnetic fields Especial emphasis is placed on the quantum mechanical treatment of laser light by means of quantum mechanical Langevin equations the density matrix equation and the Fokker Planck equation The semiclassical approach and the rate equation approach are also presented The principles underlying these approaches are used to derive the relevant equations from which in turn the various properties of laser light are derived Preface The concept of the laser came into existence more than a decade ago when SCHAWLOW and TOWNES showed that the maser principle could be extended to the optical region Since then this field has developed at an incredible pace which hardly anybody could have foreseen The laser turned out to be a meeting place for such different disciplines as optics e g spectroscopy optical pumping radio engineering solid state physics gas discharge physics and many other fields The underlying structure of the laser theory is rather simple **Mid-Infrared**

Coherent Sources and Applications Majid Ebrahim-Zadeh, Irina T. Sorokina, 2008-01-02 Covering fundamental principles and the state of the art this is a collection of reviews from experts in mid infrared mid IR coherent sources Among the sources covered are optical parametric oscillators difference frequency generators and the most recent broadband crystalline quantum cascade and fiber lasers The authors show how advances in mid IR science and technology make these sources indispensable for a variety of applications Ceramic Lasers Akio Ikesue, Yan Lin Aung, Voicu Lupei, 2013-05-23 Until

recently ceramic materials were considered unsuitable for optics due to the numerous scattering sources such as grain boundaries and residual pores However in the 1990s the technology to generate a coherent beam from ceramic materials was developed and a highly efficient laser oscillation was realized In the future the technology derived from the development of the ceramic laser could be used to develop new functional passive and active optics Co authored by one of the pioneers of

this field the book describes the fabrication technology and theoretical characterization of ceramic material properties It describes novel types of solid lasers and other optics using ceramic materials to demonstrate the application of ceramic gain media in the generation of coherent beams and light amplification This is an invaluable guide for physicists materials scientists and engineers working on laser ceramics
