Solidification and Cast Structure I. Minkoff, 1986-08-11 This practical guide presents a comprehensive account of solidification processes in metals and alloys and describes the manner in which cast structure arises Reviews the principle features of solidification theory in an accessible and easily understood manner Relates the solidification and cast structure process to different industrial processes such as conventional casting continuous casting welding and rapid solidification Provides concise descriptions of structure formation in cast steel cast iron and aluminum Includes treatment of cast ceramics glass metal nonmetal structures rapid solidification welding and continuous casting processes *Modelling the Flow and Solidification of Metals* T.J. Smith, 2012-12-06 The origin of this book can be traced to a Workshop held at the University of Cambridge in December 1985 under the auspices of the Wolfson Group for Studies of Fluid Flow and Mixing in Industrial Processes This Group was established at the University of Cambridge in January 1983 and includes members from the Departments of Applied Mathematics and Theoretical Physics Engineering and Chemical Engineering As its name suggests the objective of the Group is to undertake coordinate and stimulate research in various aspects of fluid flow and mixing in industrial processes However another equally important aim for the Group is to promote co operation between the University and industry at all levels from collaborative research projects to joint colloquia The Workshop in December 1985 on Mixing Stirring and Solidification in Metallurgical Processes which led to this book was one in an annual series of such meetings first held in December 1983 The existence of the Wolfson Group is due to the enthusiasm of its original advocate the late Professor J A Shercliff FRS Head of the Department of Engineering who together with Professor G K Batchelor FRS Professor J F Davidson FRS Dr J C R Hunt and Dr R E Britter were responsible for the initial application to the Wolfson Foundation and for the subsequent direction of the Group's activities Cast Iron Technology Roy Elliott, 1988-04-18 Cast Iron Technology presents a critical review of the nature of cast irons It discusses the types of cast iron and the general purpose of cast irons It also presents the history of the iron founding industry Some of the topics covered in the book are the description of liquid

metal state preparation of liquid metal process of melting description of cupola melting and electric melting methods control of composition of liquid metal during preparation description of primary cast iron solidification structures and thermal analysis of metals to determine its quality Solidification science and the fundamentals of heat treatment are also discussed An in depth analysis of the hot quenching techniques is provided The graphitization potential of liquid iron is well presented A chapter is devoted to microstructural features of cast iron The book can provide useful information to iron smiths welders students and researchers

Solidification Atsumi Ohno, 2012-12-06 This book deals with the fundamental casting technology issues of how metal solidifies within a mould and of when where and how equiaxed crystals are formed The author describes how he discovered the phenomenon of crystal separation and established the principle of controlling cast structures and describes the events leading up to the success of the OCC Ohno Continuous Casting Process which enables the continuous production of a single crystal ingot This book will be of interest to students and researchers as well as to practising engineers

Science and Technology of the Undercooled Melt P.R. Sahm, H. Jones, C.M. Adam, 2012-12-06 SCIENCE AND TECHNOLOGY OF THE UNDERCOOLED MELT This title was chosen as the topical headline of the Advanced Research Workshop ARW from March 17 to 22 1985 held at the Castle of Theuern The usual term Rapid Solidification is an overlapping description Due to the fact that nucleation is so eminently important for the undercooling of a melt and this in turn is an important characteristic of rapid solidification undercooling plays an essential role in rapid solidification The undercooled melt has caused an accelerated evolution if not a revolution in materials science during the last decade Several rather exciting concepts with interesting potential for novel applications are being pursued presently in various laboratories and companies They concern not only new processes and hardware developments but also present challenging perspectives for ventures including the founding of new companies or they promise growth possibilities with established larger and smaller industrial establishments

Nucleation in Condensed Matter Ken Kelton, Alan Lindsay Greer, 2010-03-19 In Nucleation in Condensed Matter key theoretical models for nucleation are developed and experimental data are used to discuss their range of validity A central aim of this book is to enable the reader when faced with a phenomenon in which nucleation appears to play a role to determine whether nucleation is indeed important and to develop a quantitative and predictive description of the nucleation behavior The third section of the book examines nucleation processes in practical situations ranging from solid state precipitation to nucleation in biological systems to nucleation in food and drink Nucleation in Condensed Matter is a key reference for an advanced materials course in phase transformations It is also an essential reference for researchers in the field Unified treatment of key theories experimental evaluations and case studies Complete derivation of key models Detailed discussion of experimental measurements Examples of nucleation in
