

Curve Fitting

- Fit the best curve to a discrete data set and obtain estimates for other data points
- Two general approaches:
 - *Data exhibit a significant degree of scatter*
Find a single curve that represents the general trend of the data.
 - *Data is very precise*. Pass a curve(s) exactly through each of the points.

- Two common applications in engineering:

Trend analysis. Predicting values of dependent variable: *extrapolation* beyond data points or *interpolation* between data points.

Hypothesis testing. Comparing existing mathematical model with measured data.
